The New Patent Bill.

estedin patents and improvements, with whom confidence in these gentlemen, and therefore we have conversed during the past week, are mention their names for the benefit of inquirdecidedly opposed to the New Patent Bill. ing readers. The Press of our country, too, which has alage, and opposed to the democratic nature of at present. our institutions—some of their views we present in another column. The general feeling OPINIONS OF THE PRESS ON THE NEW among inventors, and the honest assignees of patents, respecting it is, that "it appears to be framed for annoying and injuring them." It provides for such a tedious and expensive variety of processes for patents, that if it became a law, it would undoubtedly operate to retard improvements in the arts. Any law that would exert such a tendency, would be a public calamity; therefore, the interests of the people demand them to oppose it, and this they do. The object of any amendment to the patent law should be to lessen the number of processes through which patents have to pass; also to render those processes more simple and less expensive. The spirit and provisions of the new Bill, are of the opposite character.

The first sections of the new Bill, providing for the raising of the Patent Office into a U.S. Court, to try cases of priority in invention, and increase the expenses of the office enormously, is not required at all. The same ends could be obtained in a more equitable manner, without any extra labor on the part of the Patent of the Patent of the rest inventors against dishonest pirates. This is indeed a very easy kind of bill to frame, and in no case shall any such patent be restimony under oath of two witnesses, restisting the every way desirable. We have read the bill no case shall any such patent be reported after the expiration of said every way desirable. We have read the bill no case shall any such patent be reported after the expiration of said twenty years. And provided, further, That no patent granted under the third section of this pecting the exact date of the invention represented in the model and drawings for which a patent is applied for. Upon this evidence of priority, let the Patent Office decide every ing a system of monopoly wholly at variance case presented, and let that end the matter in : that quarter. This plan would prevent the possibility of manufacturing evidence for particular interfering cases, and would simplify

The confirming clause of the Patent Bill is certainly a disgraceful feature in it. The sum of \$100 is charged to perform a certain act regarding a patent, while it (the patent) bears upon its face evidence that it had been already confirmed. Thus every patent bears the signature of the Secretary of the Interior. and the Commissioner of Patents, and it is stamped with the seal of the Patent Office. Have not these gentlemen thus confirmed the patent as a legal instrument already, and is it not so held by all the Courts? Certainly. Then why charge \$100 for a work of supererogation? Such a provision in the Bill is a hundred dollar insinuation, (to be paid by the patentee,) upon the integrity of those who administer the affairs of the Patent Office. In fact, such a provision in the Bill is neither more nor less than a declaration that all patents are to be suspected of illegality or fraud until they are confirmed. Poor patentees would never be able to sell their patents under such a Bill until they were confirmed. It would therefore do them rank injustice, and tend to make them lose their patents altogether, as they would never be able to pay the extension and will not pass, for the united voice of the it a good system of laws. people and press is against it.

Agencies for Selling Patents.

We are frequently inquired of as to agencies for selling patents, many persons supposing that we are engaged in that branch of business. We wish to state that we are not thus engaged, never have been, and never mean to as we could wish, in our legitimate business nothing to do.

There is no reason, however, why agencies for selling patents ought not to succeed well

We trust that Members of under disguise, to certain profitable patent it to be unworthy of the present enlightened prices realized for patents never so high as Congress will follow our example. It is well monopolies-relating, in part, to pistols and

PATENT BILL.

[From the New York Express.] The New Patent Bill.

The Boston Bee points out the following prominent objections to the Patent Bill introduced into the Senate by Senator James.-Such objections deserve the serious attention of members of Congress, and if the measure is calculated to lead to much mischier, the end cept such as by this act, every patent, except such as by this act are limited to seven may be the overthrow of all laws for the protection of inventors. As it is, the discoverers the application of any patentee or assignee of a patent for the extension of a patents ogranted, previous to its expiration, and on payment of ingenious works of art are about the last to receive the benefits of their inventions. In of one hundred dollars to the credit of the Patthe main, assignees reap the profit of other ent Fund, the Commissioner of Patents shall men's brains and labor, and it has been so in extend such patent for a term of fifteen years, men's brains and labor, and it has been so in this country for fifty yours part.

> Such are only some of the evils which this new bill appears designed to inaugurate. Its principal object seems to be to give extension, india rubber,-that are now about to expire, and can be renewed in no other way. The people have not asked for any such changes as are contained in Senator James' bill, neither extension. So far they have failed, but it have inventors. They are not wanted; they seems to us that this law hides an attempt to are wrong; and therefore should never be inextend them. The Colt and Goodyear patents troduced. The present system has worked, were issued for fourteen years, and the sixth and still operates most admirably. "Let well enough alone," or at least alter only so as to amend and simplify, if that be possible.

> > [From the New York Times.] Senator James' Patent Bill.

When the exciting topics which are now engrossing the attention of the Senate shall have been disposed of, the very remarkable bill introduced by Senator James, of Rhode Island, on the 9th inst., to amend the Patent Laws, will doubtless come up for consideration, and cannot fail to elicit a warm discus-Mr. James' bill proposes certain changes of so radical and startling a character, and which must affect so many important public interests, that it will not be permitted to slip through the Senate without a searching investigation. The bill has an innocent look enough on its face, but a close examination of its principles will show that the amendments which it proposes to the existing laws are not calculated to promote the public good, though they may possibly be of great profit to certain individual interests.

Recent American Patents.

Artificial Stone-By Robert Neisch, of New York City .- This invention consists in calc'ning a quantity of plaster of Paris, and mixing with it sulphuric acid, a solution of alum, carbonate of ammonia, and sand. The paste thus formed is pressed into molds of any desired form. After a short time it hardens into a species of stone, which water or moisture, it is said, will never affect.

Improved Brick Machine. - By Edmund Kingsland, of New York City.-The molds are arranged on a rotating cylinder. In most of the brick machines of this class the mold cylinder is made very large, and the finishing is done by smaller rollers. The chief novelty in the present improvement, consists in employing a segment cylinder to do the finishing, and in causing the face of the segment to pass with a scraping movement ever the molds. This arrangement permits the use of a mold cylinder of much smaller diameter than is usual, reduces the expense, results in better work, &c.

The molds are furnished with pistons for regulating the depth, and also for pushing out the bricks. By a peculiar device within the mold cylinder, all of the pistons are moved simultaneously.

Solder-irm Stove.-By James Wilson, of Brandywine, Del.—Consists in extending hollow tubes from the outside of the stove into or through the center of the fire. The solder irons are beated by placing them within the This improvement permits the use of anthracite coal with success, saves fuel, heats the irons better, &c. It appears to be a very good and useful invention.

Improved Vise .- By Orlando V. Florey, of Yellow Springs, Ohio .- The jaws of this vise are constructed in the usual way, the stationary jaw, B, requiring to be firmly secured to he bench, A. Instead of a screw, a simple, round rod, D, passes through both jaws. To the lower end of mevable jaw C a rigid brace, G, is secured, extending up through a slot in the stationary jaw to the end of rod L, which it embraces by a fork, as represented, so that
