# Scientific American.

NEW-YORK, OCTOBER 20, 1855.

More Encroachments on the Patent Office. We learn from good authority, that, on the 22nd ultimo, the President of the United States, under the escort of the Secretary of the Interior, paid an official visit of inspection to the Patent Office building. The wily Secretary took advantage of the occasion to descant upon the pressing requirements of the Interior, the Land, and the Indian Departments, and then grew eloquent upon the unnecessary space occupied by the Patent Office, proposing to lop off a branch here, anothhave replied, in his bland and modest manner, that as far as he saw, the Patent Office appeared to need an extension rather than a restriction.

To this sensible view, we are sorry to say, he did not adhere. Yielding to the solicitations of the Secretary, and the plea that fire-proof space, for the preservation of certain upon a very limited scale. The kings and stead of operating the key by hand for sending tion of industrial specimens is a very large one, important Indian papers, must be had, the Pres- nobles of Europe were the only ones, during messages in the common way, themessage was and possesses peculiar interest from the fact ident assented to the absorption of six of the this period, who were able to support the lux- composed beforehand, and disposed helically that the whole, or nearly the whole, is of Amer-Patent Office rooms, and they have, we are in- ury of a clock. formed, been accordingly transferred. Thus was consummated another of those officialoutrages on the rights of inventors and the interfelt it our duty, of late, so bitterly to complain. recorder of the passing moments. New movements by the Secretary, placing the Patent Office more completely than ever under his thumb, and adding insult to injury, are now, we understand, in progress.

Under the laws of the Republic, the Patent Office, as it now stands, is almost an independent Department. Its chief is required to report the state of its affairs directly to Congress. It has ever been the desire of our statesmen to isolate it, as far as practicable, from politics, to relieve it from outside subservience, to promote its dignity, to increase its facilities, and in every way to encourage its growth. In its first organization it was nominally attached to the State Department, but was never regarded by any of the Secretaries of that branch of government as subject to their interference or control.

The law which created the Secretaryship of of the Interior, merely transferred the nominal connection then existing between the Patent Office and the State Department to the Interior Department. The Secretary of the Interior has never received, by statute, a single iota more of authority over the Patent Office than the Secretary of State formerly held. But, in the absence of a Commissioner of Patents, the Secretary of the Interior becomes his own lawmaker, and aspires to self-constituted powers. Ignorant of the wants of the Patent Office, and disregardful of the views of its officers, he assumes a control over it for which he is utterly unqualified by nature, and unjustified by right.

There is but one permanent remedy for this miserable state of affairs, and it consists in the absolute separation of the Patent Office from the Interior Department. If inventors will but rouse up, appeal to their Representatives, and show a determined spirit in the matter, this much-needed reform may, we doubt not, be triumphantly carried through the next Congress
