

COLLINS AND SIMS' COMBINED DOOR BELL AND BURGLAR ALARM.

The engravings represent a device intended to act as an ordinary day alarm for visitors in place of the common door bell, and also as a means of notifying the inmates when the burglar attempts to unlawfully enter. Fig. 1 represents the mechanism, the bell being removed to show the parts. A, is

a plate of metal to be secured to the inside of the door. The bell—the ordinary gong-shaped bell—is screwed on the center spindle, B. C is a cam secured to a shaft passing through the door, and fitted on the outside with an ornamental crank. When it is turned the points engage with the arm end of the hammer lever, D, bringing the hammer back toward the center of the plate for a blow. The spring, E, when the hammer is released from the cam, throws the hammer against the bell. This is the mechanism for the ordinary purposes of a door bell.

When, however it is to be used as a burglar alarm another device comes into play. The curved lever, F, is provided with notches at one end which are arranged so as to come in con-

tact with the lower end of the hammer lever. This notched lever is operated by a cam, G, on the horizontal shaft which actuates the lever, F, against its short end, and depressing the notched end, brings the hammer back for a blow. To the shaft is attached a handle, H, which may be connected by a cord, or wire and hook to a staple on the door jamb, as in Fig. 2. It will be seen that if the door is then opened the handle, H, will be lifted and give an alarm by the bell.

There appears to be nothing in this device liable to derangement or breaking. It is certainly simple enough to be durable. It was patented through the SCIENTIFIC AMERICAN Patent Agency, Nov. 20th, 1866 by D. L. Collins, or Elbridge Sims, Antwerp, N. Y., whom address for additional particulars.

THE WASTING OF COINS.

It is stated by an eminent English authority that the life of coins is much briefer now than before the introduction of steam for passenger travel. This is attributed to the almost constant attrition to which they are subjected by being carried about and the consequent passage of them from hand to hand. The authority we quote states that it takes on an average a hundred old shillings to make eighty new ones. This is a fearful waste, and as we expect some time to see gold and silver again a common medium of exchange in this country, it is of some importance to ascertain a remedy for the deterioration of coins. With copper and bronze coins it may be of no consequence, as they never bear intrinsically the value which they nominally possess, so that there is really no actual loss from wear. Gold and silver coins, however, are really worth their face or nominal value.

The method of manufacturing coins is opposed to their longevity. The plain disk is placed between the dies, as soft as the most perfect annealing can make it. When minted the recessed surface is hardened by compression, while the raised surfaces are left in a state very near that of their original softness. But these parts, unfortunately, are just those most exposed to attrition. The only remedy that suggests itself under these circumstances is a broad and projecting rim which, presenting less surface than the other figures, and being higher, would in a measure defend and protect them from rapid deterioration.

The Prussian Patent Law.

In our last number we discussed the defects of the Prussian patent system, and intimated that measures were in progress to improve it. We have since received a letter from the U.S. minister at Berlin, Hon. Jos. A. Wright, in answer to one we addressed to him on this subject in November last. He says the whole subject of patents in Prussia is practically under the direction of a Minister who changes and controls it from time to time as he sees fit. He also says that a gentleman is now preparing an act—or new law—for the "New North German Confederation" which will embrace all modern reforms such as will meet the requirements of the present time. Mr. Wright has given this subject considerable attention and deserves the thanks of his countrymen.

CITY SUBSCRIBERS.—The SCIENTIFIC AMERICAN will be delivered in every part of the city at \$4 a year. Single copies for sale at all the News Stands in this city, Brooklyn, Jersey City, and Williamsburg, and by most of the News Dealers in the United States.

RECEIPTS.—When money is paid at the office for subscriptions, a receipt for it will be given; but when subscribers remit their money by mail, they may consider the arrival of the first paper a bona-fide acknowledgment of their funds.

Advertisements.

A limited number of advertisements will be admitted in this page on the following terms:— Seventy-five cents a line, each insertion, for solid matter; one dollar a line when accompanied by engravings.

HOW TO OBTAIN PATENTS.

The first inquiry that presents itself to one who has made any improvement or discovery is: "Can I obtain a Patent?" A positive answer can only be had by presenting a complete application for a Patent to the Commissioner of Patents. An application consists of a Model, Drawings, Petition, Oath, and full Specification. Various official rules and formalities must also be observed. The efforts of the inventor to do all this business himself are generally without success. After a season of great perplexity and delay, he is usually glad to seek the aid of persons experienced in patent business, and have all the work done over again. The best plan is to solicit proper advice at the beginning.

If the parties consulted are honorable men, the inventor may safely confide his ideas to them; they will advise whether the improvement is probably patentable, and will give him all the directions needful to protect his rights.

We (MUNN & CO.) have been actively engaged in the business of obtaining patents over twenty years—nearly a quarter of a century. Many thousands of inventors have had benefit from our counsels. More than one-third of all patents granted are obtained by us. Those who have made inventions and desire to consult with us, are cordially invited to do so. We shall be happy to see them in person, at our office, or to advise them by letter. In all cases they may expect from us an honest opinion. For such consultations, opinion, and advice, we make no charge. A pen-and-ink sketch, and a description of the invention should be sent, together with stamps for return postage. Write plainly do not use pencil nor pale ink; be brief.

All business committed to our care, and all consultations, are kept by us secret and strictly confidential. Address MUNN & CO., 37 Park Row, New York.

In Order to Apply for a Patent, the law requires that a model shall be furnished, not over a foot in any dimension, smaller, if possible. Send the model by express, pre-paid, addressed to Munn & Co., 37 Park Row, N. Y., together with a description of its operation and merits; also, remit the first Government and stamp fees, \$16. On receipt thereof we will prepare the patent papers and send them to the inventor for examination, signature, and oath. Our charge for preparing the drawings and all the documents, with attendance to the business before the Patent Office, is \$25, for the simplest cases, up to \$35, and more, according to the labor involved. Our charges are always very moderate. When the patent is allowed, \$20 more is paid to the Government, making a total of \$61 for the simplest case. The model should be neatly made of any suitable materials, strongly fastened, without glue, varnished or painted upon it. The name of the inventor should be engraved or painted upon it. When the invention consists of an improvement upon some other machine, a full working model of the whole machine will not be necessary. But the model must be sufficiently perfect to show, with clearness, the nature and operation of the improvement. New medicines or medicinal compounds, and useful mixtures of all kinds, are patentable. When the invention consists of a medicine or compound, or a new article of manufacture, or a new composition, samples of the article must be furnished, neatly put up. Also, send us a full statement of the ingredients, proportions, mode of preparation, uses, and merits. The average time required to procure a patent is six weeks. We frequently get them through in less time; but in other cases, owing to delay on the part of the officials, the period is sometimes extended to two or three months, and even more. We make a special point to forward our cases as RAPIDLY AS POSSIBLE.

Quick Applications.—When, from any reason, parties are desirous of applying for Patents or Caveats, in great haste, without a moment's loss of time, they have only to write or telegraph us specially to that effect, and we will make special exertions for them. We can prepare and mail the necessary papers at less than an hour's notice, if required.

Caveats.—A caveat gives a limited but immediate protection, and is particularly useful where the invention is not fully completed, or the model is not ready, or further time is wanted for experiment or study. After a caveat has been filed, the Patent Office will not issue a patent for the same invention to any other person, without giving notice to the caveator, who is then allowed three months time to file in an application for a patent. A caveat, to be of any value, should contain a clear and concise description of the invention, so far as it has been completed, illustrated by drawings when the subject admits. A caveat consists of the Petition, Oath, Specification, and Drawings. The Government fee for filing a caveat is \$10, and our ordinary charge to prepare the documents and attend to the whole business from \$10 to \$15. In order to file a caveat, the inventor needs only to send us a letter containing a sketch of the invention, with a description in his own words, and fees, \$25 in full. Address MUNN & CO., 37 Park Row, N. Y.

Additional notices can be made to Caveats at any time. A caveat runs one year, and can be renewed on payment of \$10 a year as long as a period as desired.

Preliminary Examination.—This consists of a special search, made at the U. S. Patent Office, Washington through the medium of our house in that city, to ascertain whether, among all the thousands of patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search, we send a written report of the result to the party concerned, with suitable advice. Our charge for this service is \$5.

If the device has been patented, the time and expense of constructing models, preparing documents, etc., will, in most cases, be saved by means of this search: if the invention has been in part patented, the applicant will be enabled to modify his claims and expectations accordingly.

Parties desiring the Preliminary Examination are requested to remit the fee (\$5), and furnish us with a sketch or photograph, and a brief description of the invention. Where examination is desired upon more than one invention, \$5 for each, must be sent, as each device requires a separate, careful search. Address MUNN & CO., 37 Park Row, New York.

Other Information.—If you wish for general information as to the rules and law of Infringements, Rescues, Claims, etc., state your inquiries clearly, and remit \$5. Opinions, in special cases of infringement, cost more. If you wish for advice in regard to assignments, or upon the rights of parties under assignments, joint ownership in patents, contracts, or licenses, state the points clearly upon which information is wanted, and remit \$5.

If you desire to know in whose name the title to a Patent is officially recorded, at Washington; or if you wish for an abstract of all the deeds of transfer connected with a Patent, send us the name of the patentee, date of patent, etc., and remit \$5.

If you desire a sketch from the drawings of any Patent, and a description from the specification, give the patentee's name, date of the patent, and remit \$5.

If you desire to have an assignment of a Patent, or any share thereof, or a license, made out in the proper manner, and placed on record, give us the full names of the parties, residences title of the invention, etc., and remit \$5. This includes record fee.

Infringements.—The general rule of law is, that the prior patentee is entitled to a broad right in the invention. The scope of any patent is therefore governed by the inventions of prior date. To determine whether the use of a patent is an infringement of another, generally requires a most careful study of all analogous prior patents and rejected applications. An opinion based upon such study requires for its preparation much time and labor. Having access to all the patents, models, public records, drawings, and other documents pertaining to the Patent Office, we are prepared to make examinations, and give opinions upon all infringement questions, advice as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Address MUNN & CO., 37 Park Row, N. Y.

When an application is found to conflict with a caveat, the caveator is allowed a period of three months within which to present an application, when an interference may be declared.

Upon the declaration of an interference, a day will be fixed for closing the testimony, and a further day fixed for the hearing of the cause. The arguments of counsel must be in the office on the day of hearing.

The management of Interferences is one of the most important duties in connection with Patent Office business. Our terms for attention to Interferences are moderate, and dependent upon the time required. Address all letters to MUNN & CO., No. 37 Park Row, New York.

Our Book of Instructions, containing the Patent Laws, Official Rules, 150 engravings, valuable tables for calculations, and full instructions concerning the cost of patents, method of procedure, forms for assignments, etc., is sent gratis on application. Address all letters (post-paid), MUNN & CO., No. 37 Park Row, New York City. Office in Washington, Cor. F and 7th streets.

The SCIENTIFIC AMERICAN, a large and splendid weekly newspaper, profusely illustrated, devoted to Invention, Science, and the various Arts, is published by MUNN & CO. at \$3 a year. Specimens gratis.

ASTRONOMICAL TELESCOPE FOR Sale.—A Fine Instrument, made by Alvan Clark & Sons, Cambridge; object glass 4 1/2 in., focus 6 ft. 3 in., with Micrometer, Positive and Negative Eye Pieces, Alt-azimuth stand, all complete. A fine opportunity for a college or amateur. Address Telescope, box 599 P. O., N. Y. 50¢

FOR SALE.—WILL SELL THE EXCLUSIVE RIGHT to manufacture and sell my improved Wire Clothes-line and Fastener attached. Allowed 4th Inst. Address ALBERT D. RUST, Patentee, 5 20th St. St. Louis, Gratiot Co., Mich.

CIRCULAR SAWS.—With EMERSON'S PATENT MOVABLE TEETH. These saw cut more and better lumber in the same time and with less power, than any other saw in the world, with less expenditure of labor and flies to keep in order, and never wear smaller. Also, Emerson's Patent Gaging and Sharpening Swage, for spreading the points of saw teeth. Send for descriptive pamphlet, with new price list. AMERICAN SAW COMPANY, 2 Jacob street, near Ferry street, New York.

GLYNN'S ANTI-INCRUSTATION Powder for boilers of Steam Engines. References: Prof. Chandler, N. Y. School of Mines, Columbia College, New York. For information, apply to C. D. FREDERICKS, 587 Broadway.

THE EUROPEAN INVENTOR'S AGENT.—CY CO., 96, Newgate street, London, E. C. Mr. T. BROWN, C. E., Manager. This Company undertake the purchase, sale, or licensing of Patents in any part of the World, on Commission only. No business as Agents for procuring Letters Patent undertaken. Information for Inventors or Owners of Patents, or for those desirous of purchasing Patents, will be freely given. The Offices of the Company are at the disposal of Inventors and these interested in Inventions; also, for the convenience of those having no London address, Letters Patent can be addressed to the offices. Further particulars on application.

TURBINE WATER WHEELS.—The REYNOLDS PATENT embodies the progressive spirit of the age. Simplicity, Economy, Durability, Accessibility all combined. The only Turbine that excels Overshots. Awarded the Gold Medal by American Institute. Shafting, Gearing and Pulleys furnished for all kinds of Mills, made on Mechanical Principles, under my personal supervision, having had long experience. Circulars sent free.

GEORGE TALLCOT, 408 1st St.—H] No. 96 LIBERTY STREET, NEW YORK. \$30,000 FOR A FORTUNE, AND NO DECEPTION. Address HARRIS BROTHERS, Boston, Mass. 340*

EUROPEAN AGENCY for the EXHIBITION AND SALE OF AMERICAN PATENTS AND MANUFACTURES. BLANCHARD & MCKEAN Will attend personally and promptly to all business relating to the interests of American Inventors and Manufacturers in France and England. For Circular and further information address 82 Boulevard de Sebastopol, Paris, France. Or, Post-office box 365, Washington, D. C. 340*

TO PIN MANUFACTURERS.—NO MORE TROUBLE FROM PINS COMING OUT.—A New Pin, Patented Dec. 11, 1866. For description and cut see Scientific American, No. 3, page 36. The Letters Patent allow a variety of forms, so that pins can be made to be withdrawn by fingers only, without injury to the fabric, or, if designed for permanent fastenings, can be made so as to be removed only by tearing out. The entire rights for the United States, or rights for districts, will be sold. Being a monopoly for seventeen years, it will pay the purchaser an immense profit. The Patent will be sold to the highest bidder. Offers may be made to, or information obtained from, the attorney of the inventor. W. M. D. HARDEN, Attorney-at-Law, Savannah, Georgia. 340*

SETS, VOLUMES AND NUMBERS. Entire sets, volumes and numbers of SCIENTIFIC AMERICAN (Old and New Series) can be supplied by address: A. B. C., Box No. 773, care of MUNN & CO., New York.

Scientific American. ENLARGED FOR 1867.

This is the oldest, the largest and most widely circulated journal of its class now published. It is the constant stimulant of the Editors to discuss all subjects relating to the industrial arts and sciences, in a plain, practical, and attractive manner.

All the latest and best Inventions of the day are described and illustrated by SPLENDID ENGRAVINGS prepared expressly for its columns by the first Mechanical Engravers in the country.

It would be impossible within the limits of this Prospectus, to enumerate the great variety of subjects discussed and illustrated. A few only can be indicated, such as Steam and Mechanical Engineering, Fire-arms, Mechanics' Tools, Manufacturing Machines, Farm Implements, Hydraulic Engines, Wood-working Machines, Chemical Apparatus, Household Utensils, Curious Inventions, beside all the varied articles designed to lighten the labors of man in the Shop, Factory, Warehouse, and Household. The SCIENTIFIC AMERICAN has always been the Advocate of the Rights of American Inventors. Each number contains a weekly list of Claims of Patents, furnished expressly for it by the Patent Office, together with notes descriptive of American and European Patented Inventions.

Patent Law Decisions, and questions arising under these laws, are fully and freely discussed by an able writer on Patent Law.

Correspondents frequently write that a single receipt will repay them the whole cost of a year's subscription. With such advantages and facilities, the columns of the SCIENTIFIC AMERICAN are of special value to all who desire to be well informed about the progress of Art, Science Invention, and Discovery. Published Weekly, two volumes each year, commencing January and July.

Per annum.....\$3 00 Six months.....1 50 Ten copies for One Year.....25 00 Canada subscriptions, 25 cents extra. Specimen copies sent free. Address MUNN & CO., Publishers, No. 37 Park Row, New York City
