whether the improvement is probably patentable, and will give him all the directions needful to protect his rights.

Messrs. MUNN & CO., in connection with the publica

rights.
Messrs, MUNN & CO., in connection with the publication of the SCIENTIFIC A MERICAN, have been actively engaged in the business of obtaining patents for over twenty years-nearily a quarter of a century. Over Fifty thousands inventors have had benefit from our counsels. More than one third of all patents granted are obtained by this form.
Those Who have made inventions and desire to consult with us, are cordially in vited to do so. We shall be happy to see them in person, at our office, or to advise them by tetter. In all cases they many expect from us an *Abnest opinion*. For such consultations, opinion, and advice, we make no charge. A pen-and-ink sketch, and a dwerpion of the invention should be sent, together with stamps for return postage. Write plainly, do not use pencil nor pale ink; be brief.
All business committed to our care, and all consultations, are kept by us segret and strictly confidential. Address MUNN & CO., 37 Park Row, New York.
In Order to Apply for a Patent, the lay requires

BAIRD'S CATALUGUE OF PRACTICAL AND SCIENTIFIC BOOKS, Revised and Completed to June 1, 1867, will be sent, free of postage, to any one who will favor me with his address. HENRY CAREY BARD, Industrial Publisher, 406 Walnut street, Philadelphia.

hons, are kept by us seered and strictly confidential. Address MUNN & CO., 37 Park Itow, New York. In Order to Apply for a Patent, the law requires that a model shall be furnished, not over a foot in any dimensions.-smaller, if possible. Send the model by express, prepared, addressed to Munn & Co., 37 Park Row, N. Y. together with a description of its operation and merits. On receipt thereof we will examine the invention carefully and advise the party as to its patentability, free of Charge. The model shall be neatly made of any suitable materials, strongly fastened, without ghue, and neatly painted. The name of the invention consists of an improvement upon some other machine, a full working model of the whole machine will not be necessary. But the model must be sufficiently perfect to show, with clearness, the nature and operation of the improvement. New medicines of medical compounds, and useful mix threes of all kinds, are patentable. When the inventioes of a new composition, and useful mix threes of the article must be turnshed, neatly put up. Also, send us a full statement of the ingredients, proportions, mode of preparation, uses, and merits.

Preliminary Examination.--In order to obtain a Preliminary Examination.--In order to obtain a Preliminary Examination, make out a written descrip-tion of the invention in your own words, and a rough peneil or pen-and-ink sketch. Send these with the fee of %5 by mail, addressed to MUNN & CO., 37 Park Row, and in due time you will receive an acknowledgment there-or, followed by a written report in regard to the patentabil-ty of your in provement. The Preliminary Examination consists of a special search, which we make with great care, among the models and patents at Washington to ascertain whether the improvement presented is patent-able.

Quick Applications.—When, from any reason, parties are desirous of applying for Patents or Cavents, in GREAT HASTE, without a moment's loss of time, they have only to write or telegraph us specially to that effect, and we will make special exertions for them. We can prepare and mail the necessary papers at less than an bour's notice, if required.

and we will make special exertions for birth. We can appear and mail the necessary papers at less than an both's notice, if resulted.
 Reissues.--A reissne is granted to the original patters, when by reason of an insufficient or detective specification the original patent is invalid, provided the error has arisen from hadvertence, accident, or mustake, without any fraudulent or deceptive intention.
 A patone may at his option, have in his retsme a separate patent for each distinct part of the invention compresended in his original application, by paying the required fee in each case, and complying with the other required fee in each case, and complying with the other required specification descriptive of the part or parts of the invention claimed in such division; and the drawing may represended, or the model is not ready. After a Caset spece a limited but immediate protection, and is particularly useful where the invention is not filly completed, or the model is not ready. After a Caset after the case of the case of the allowed three moths the other are uption be of any value, should contain a clean and concluse description of the invention, so far as it has been filed, the Caveator, who is then allowed three moths time to tile in an application for a patent. A Caset gives moths conclused by a wing's where the allowed in the object admits. In order to file a Caveat the invention normal site has been filed, the Patent Office will not issue a patent for the acaveat the invention reads only to send us a left of the acaveat the down any site has been filed, and the object admits. In order to file a caveat the invention reads only to send us a left or containing a sketch of the invention, with a description in his own words. Address MUNN & CO., 37 Park for w, N.Y.

year for as long a period as desired. Interferences,---When each of two or more persons claims to be the first inventor of the same thing, an "In-terference" is declared between them, and a trial is had before the Commissioner. Nor does the fact that one of the parties has already obtained a patent prevent such an interference": cr.at though the Commissioner has no pow-er to cance i a prod. I already issued, he may, if he finds hat another person was the prior inventor, giv him also a patent, and thus place them on an equal jooting before the courts and the public BAIRD'S CATALUGUE OF PRACTICAL AND SCIENTIFIC BOOKS, Revised and Compisted to June 1, 1867, will be sent, free of postage, to any site who will favor me with his address. HENRY CARAFY BAIL Industrial P(d) isher, 406 Wahntstreet, Philadelphila

the courts and the public **Foreign Patents**, --American Inventors should bear in mind that, as a general rule, any invention that is val-nable to the patentee in this country is worth equally as as much in England and some other forelen countries. Five Patents-American, English, French, Belgian, and prussiau - wills.cure an inventor exclusive monopoly to lis discovery among one HUNDRED AND THERY MILLIONS of the most intelligent people in the world. The facili-ties of business and steam communication are such that patents can be obtaine : abroad by our citizens almost as casily as at home. The najority of all patents taken out by Americans in foreign countries are obtained through the SOIENTIFIC AMERICAN PATENT AGENCY. A Circular containing further information and a Synopsis of the Pat-ent Laws of various countries will be furnished on appli-cation to Messrs. MUNN & Co.

CONTENTS:

CHAPTER 1.-THE PRINCIPLES OF MECHANISM.

C O N T E N T S: CHAPTER L-THE PRINCIPLES OF MECHANISM. GENERAL VIEWS, LINK-WORK, WRAPPING CONNECTORS WHEEL WORK, SLIDING CONTACT:-General views re-lating to machines; the parts of a machine; elemeatary forms of mechanism; link work. ELEMENTARY FORMS OF MECHANISM:-TO construct Watt's parallel motion; to multiply oscillations by means of lnk work; to produce a velocity which shall be rapid-ly retarded by means of link work; to produce a recip-rocating intermittent motion by means of link work; the ratchet wheel and detent; intermittent motion produced by link work connected with a raticet wheel; wrapping connectors; speed pulleys; guide pulleys; to produce wrapping connectors from slipping; system of pulleys; to produce a varying velocity ratio by means of wrapping connectors; wheel work producing motion by rolling contact; idle wheels; annular wheels-concentric wheel; wheel work when the axes are not parallel to each other; if ace wheel and lanterm-crown wheels; to const. uce bev-el wheels or bevel gear when the axes are not in the same plane; variable motions produced by wheel work lawing rolling contact; intermittent and recipro-cating motions produced by wheel work laving rolling contact; the wedge and movable inclined plane; still picces producing motion by sliding contact; the eccentr.c wheel; construction of screws; the solid screw and ut; the common press; the compound screw; the end-less screw; the differential screw; the Archimedian screw creeper; mechanism for critting screws; to p oduce a canging reciprocating rectilinear motion by a combina-tion of the cam and screw; to produce a borng motion by a combination of the screw and doothed wheels. CHAPTER I.-ON MACHINERY OF TRANSMISSION. ON WHEELS AND PULLIES:-Wrapping connections;

tion of the cam and screw ; to produce a borng motion by a combination of the screw ; to produce a borng motion by a combination of the screw and toothed wheels. CHAPTER I.-ON MACHUNERY OF TRANSMISSION. On WHEELS AND PULLIES:-Wrapping connections ; where employed; a dwantages and disadvantages of ; ma-terial employed in the construction of ; strength of; table of approximate widths of leather straps, in medes, neces-sary to transmit any required lumber of horzepower. Toorner WHEELS:-Introduction of as i from as a material for spur wheels; Rennie's use of cast iron in all the dot.ling is achine. Spur GeARMONT, as exemplified in the construc-tion of the Albion mills; true principle of construction ; tooth-cutting is achine. Spur GeARMONT, as exemplified in the construc-tion of the Albion mills; true principle of construction ; tooth-cutting is achine. Spur GeARMONT, as exemplified in the construc-tion of the Albion mills; true principles of construction ; tooth-cutting is achine. True for WHEELS:-INdues for finding the pitch and di-ameter of wheels; table of constants for wheel work , and number of teeth. TERTH OF WHEELS:-The principles which determine the proper form ; formation = cpicycloid; and hypo-cycloidal enves ; construction of or picycloid; and hypo-scritching the teeth of wheels ; dooltogrup; general form and proportions of teeth of wheels in inches and thirty-seconds of an inch. Strew BevELS:-Examination of the Curves ; forma-tion and form of veeth. Stew BevELS:-Definitions and method of setting out the teeth.

SEEW BEVELS:-Definitions and method of seeing one the teeth. The WORMAND WHEEL:-Description of construction. STRENGTH OF THE TEETIL IN WHEELS:-Indues to be ob-served in calenations, line of greatest strain; taile of relation of horses-power transmitted, and velocity at the pitch circle to presure on techt; table showing the pitch and thickness of techt to transmit a given number of borses-power at different velocities; table showing the breadth of teeth required to transmit different amounts of force at a uniform pressure of 400 lbs per inch.

CHAPTER III. ON THE STRENGTH AND PROPERTORS OF SHAFTS :--The factory system necessitates the use of long ranges of shafts. Division I .:- The material of which shafting is con-

"Division L:-The material of which shafting is con-structed. Division II. TRANSVERSESTEAIN:-Resistance to rup-ture; rules for the strength of shafts; table of r sistance to flexare; weights producing a deflection of 1-200 of the length in cast-pron cylindrical shafts; table of of the shaft; to flexare; weightsproducing a deflection of 1-200 of the length in wrought-iron cylindrical shafts; table of deflec-tion of cast-pron cylindrical shafts; table of deflec-tion of cast-pron cylindrical shafts arising from the weight of the shaft; table of deflection of wronght-iron cylindri-cal shafts, arising from the weight of the shaft. Division III. Torsion:-Coulomb's deductions and formula; Bevan's values of medulus of torsion; Wer-them's formulæ for cy indrical bodies; resumé of exper-iments on cylinders of circular section; resumé of exper-iments on the torsion of hollow cylinders of copper; re-sumé ou experiments on the torsion for ellipt cal bars; table of the safe working torsion for cast-iron shafts; table of the safe working torsion for conglit-iron shafts. Division IV:-Velocity of -hafts; table of the diameter of wronglit-iron shafts increased for the safe. Division V. ON JOURXALS:-Length of journals; ulti-mate pre-sure per square inch on journal; form of journ-als. Division VL, FRICTION:-Laws of; Rennie's table of

als. Dryrston VI. FRICTION :-Jaws of; Rennie's table of coefficients of friction under pressures increased contin-ually up to limits of abr sion. Dryrston VI. Lebucarrons :-Lubricants; method of effecting complete lubricanton.

CHAPTER IV.-ON COUPLINGS FOR SHAFTS AND ENGAGING AND DISENGAGING GEAR. COUPLINGS:--Frinitive cast-iron square coupling box; the claw coupling: Mr. Hewe's coupling; the disk coupling; the circular half-lap coupling; the sfor the propor-tions of the half-lap coupling; the cylindrical batt-end coupling.

Coupling. DIVISION VIII. DISENGAGING AND RE-ENGAGING GRAR:-Throwing wheels out of gear with an horizontal lever: throwing wheels out of gear with a standard or Plummer-block and movable slide; sleenga us machinery by the fast and loose pulley; disenga ing machineric with the sack traggle motion; callendering marine friction clutch; friction cones; friction disks; friction conplings; disengaging and re-engaging clutch; two other forms of ditto; Mr. Bodmer's clutch.

ditto; Mr. Bodmer's clutch. Division IX. HAGERS, PLUMMER-BLOCKS, ETC., FOR CAREYING SHAFTING --Pedestal f r supporting shafing on the floor; pedestal for bolting shaft ing to a wall, hange-er for suspending shafting from a beam in the ceiling; hanger for suspending shafting from the floor; hanger where great strength s required; hanger to connect iwo or three ranges of shafting; method of connecting ranges of shafting at right-angles to each other by means of plann-ner-blocks; table of the diameters, pitch, velocity, etc., of spur fly wheels of the new construction.

The undersigned have the satisfaction to announce that on the 1st of July next they will begin the publica-				
tion of an American reputit of THE CHEMICAL NEWS				
JOURNAL OF PHYSICAL SCIENCE.				
DEVOTED TO				
CHEMISTRY, PHOTOGRAPHY				
PHARMACY, PATENTS,				
MINERALOGY,				
METALLURGY, ABSTRACTS,				
MINING, REPORTS,				
ELECTRICITY, ETC., ETC.				
THE MOST POPULAR AND USEFUL ISSUE OF THE FOREIGN SCIENTIFIC PRESS.				
This valuable Journal is devoted to Scientific, Analy- tical and Fechnical CHEMISTRY, PHARMACY, MIN- ERALOGY, METALLURGY, MINING, ELECTRICITY, PHOTOGRAPHY, PATENIS, REVIEWS, and includes ABSTRACTS of all important intelligence from the co- temporneous Scientific Press, with REPORTS of the proceedings of Scientific Bodics. Its foremost rank as the ending representative of these interests is undisputed. While its importance to CHEMISTS, DRFOGUSTS, APOTH- coartes, MANUEACTURERS, PHOTOGRAPHYERS, ASSA VERS, and all other kindred scientific pursuits, is universally acknowledged, the high piece of the original Journal has necessarily limitedits circulation in America. The sub- scription to the London suce is TWEIVE DOLLARS A YEAR, but the price of the American reprint, which will be printed in exact fac simile of the original, will be TWENTY-FIVE CENTS A MONTH. No interested class can now afford to be without this indipensable REFERTORY of PRACTICAL SCIENCE. While the Reprint, inform, size, type and engraving, will be a literal copy of the original, allows the yearly numbers to be included in one compact quarto yourme of STA HUNDRED AND FITY PAGES. Our Mr. TOWNSEND AND STURY 'S DRACK' on and it will be probabled in MONTHITY instead of WERELY num- bers. This desirable change is more convention, and it will be probabled in MONTHITY instead of WERELY num- cat lows the yearly numbers to be included in one compact quartor of a century, null it has reached an unrece- dented elerculation, and here foces contident "The CHEMIT' A quarter of a century, until it has reached an unrece- with the scientific world, and take its permanent place with				
And for sale by all the principal Booksellers and News- dealers. 1*
