

ATENTS

rights.

Messrs. MUNN & CO., in connection with the publication of the Scientific American, have been actively engaged in the business of obtaining patents for over twenty years—nearly a quarker of a century. Over Fifty though the properties of t

than one third of all patents granted are obtained by this firm.

Those who have made inventions and desire to consult with us, are cordially invited to do so. We shall be happy to see them in person, at our office, or to advise them by letter. In all cases they may expect from us an honest opinion. For such consultations, opinion, and advice, we make no charge. A pen-and-ink sketch, and a description of the invention should be sent, together with stamps for return postage. Write plainly, do not use pencil nor pale ink; be brief.

All business committed to our care, and all consultations, are kept by us secret and strictly confidential. Adverses MUNN & CO., 37 Fark Row. New York.

Dealtwiness Examination.=-In order to obtain a

Preliminary Examination,—In order to obtain a reliminary Examination,—In order to obtain a reliminary Examination, make out a written description or the invention in your own words, and a rough pencil or pen-and-ink sketch. Send these with the fee of \$5 by mail, addressed to MUNN & CO., 37 Park Row, and in due time you will receive an acknowledgment thereof, followed by a written report in regard to the patenta bility of your improvement. The Preliminary Examination consists of a special search, which we make with great care, among the models and patents at Washington to ascertain whether the improvement presented is patentable.

In Order to Apply for a Patent, the law requires that a model shall be furnished, not over a foot in any dimensions,—smaller, if possible, Send the model by express, pre-pand, addressed to Munn & Co., 37 Park Row, N. Y., together with a description of its operation and merits. On receipt thereof-we will examine the invention carefuly and advise the party as to its patentability, free of charge.

The model should be neatly made of any suitable mate-

On receipt thereof we will examine the invention carefully and advise the party as to its patentability, free of charged and advise the party as to its patentability, free of the model should be neatly made of any suitable materials, strongly fastened, without gine, and heatly painted. The name of the in ventors hould be engrayed or painted upon it. When the invention consists of an improvement upon some other machine, afull working model of the whole machine will not be necessary. But the model must be sufficiently perfect to show, with clearness, the nature and operation of the improvement.

New medicines or medical compounds, and useful mixtures of all kinds, are patentable.

When the invention consists of a medicine or compound, or a new article of manufacture, or a new composition, samples of the article must be turnished, neatly put up. Also, send us a full statement of the ingredients, proportions mode of preparation, uses, and merits.

Reissues.—A reissue is granted to the original patents.

tions mode of preparation, uses, and merits.

Relsaues.—A ressue is granted to the original patentee, his heirs, or the assigneds of the entire interest, when by reason of an insufficient or defective specification the original patent is invalid, provided the error has arisen from inadvertence, accident, or mistake without any fraudulent or deceptive intention.

A parentee may, at his option, have in his reissue a separate patent for each distinct part of the invention comprehended in his original application, by paying the required fee in each case, and complying with the other requirements of the law, as in original applications.

Each division of a reissue constitutes the subject of a separate specification descriptive of the part or parts of the invention claimed in such division; and the grawing may represent only such part or parts. Address MLNN & CO., 37 Park Kow, for full particulars.

Interferences.—When each of two or more persons

ECO., 3! Park Row, for Inil particulars.

Interferences...—When each of two or more persons claims to be the first inventor of the same thing, an "Interference" is declared between the most a trial is had before the Commissioner. Nor does the fact that one of the parties has aiready obtained a patent prevent such an interference; for, although the Commissioner has no power to cancer a patent aiready issued, he may, if he finds that another person was the prior inventor, give him also a patent, and thus place them on an equal sooting before the courts and the public

Caveats.—A Caveat gives a limited but immediate protection, and is particularly useful where the invention is not fully completed, or the model is not ready, or further time is wanted for experiment or study. After a Caveat has been filed, the Patent Office will not issue a patentifor the same invention to any other person, without giving notice to the Careator, who is then allowed three months time to file in an application for a patent. A Caveat, to be of any value, snould contain a clear and concise description of the invention, so far as it has been completed, illustrated by drawings when the object admits. In order to file a Caveat the inventor needs only to send us a letter containing a sketch of the inventor, with a description in his own words. Address MUNN & CO., 37 Park Row, N. Y.
Additions can be made to Caveats at any time. A Caveat runs one year, and can be renewed on payment of \$10 a year for as long a period as desired.

Quick Applications.—When, from any reason, par as are desirous of applying for Patents or Caveats, in GF at HASTE, without a moment's loss of time, they have only to write or telegraph us specially to that effect, and we will make special exertions for them. We can prepare and mail the necessary papers at less than an hour's notice, if required.

prepare and mail the necessary papers at less than an Hour's notice, if required.

Foreign Patents.—American Inventors should bear in mind that, as a general rule, any invention that is valuable to the patentee in this country is worth equally as as much in England and some other foreign countries. Five Patents—American, English, French, Belgian, and Prussian—will secure an inventor exclusive monopoly to his discovery amone one Hundred and Thirty Millions of the most intelligent people in the world. The facilities of business and steam communication are such that patents can be obtained a broad by our citizens almost as easily as at home. The majority of all patents taken out by Americans in foreign countries are obtained through the Scientific Americans for information and a Synopsis of the Patent Laws of various countries will be furnished on application to Mesars. Munn & Co.

For Instructions concerning Foreign Patents, Reissues, Interferences, Hints on Selling Patents, Rules and Proceedings at the Patent Office, the Patent Laws, etc., see our Instruction Book. Sent free by mail on application. Those who receive morethan one copy thereof will oblige by presenting them to their friends.

Advertisements.

A limited number of advertisements will be admitted in this page on the following terms: Seventy-five cents a line, each insertion, for solid matter; one dollar a line for space occupied by engravings.

GREAT ECONOMY IN WATER POWER.

EFFEL'S DOUBLE TURBINE WATER

Our wheels are as well adapted to low as high falls. Some of them are running successfully under three feet fall.

Danville, Vermillion Co., Ill., Aug. 16, 1867.

Messrs. Jas. Leffel & Co., Springfield, Ohio.—

Gents:—In answer to your inquiries of the 13th inst., we would say, your wheel, that we are now running in our factory (in the place of the overshot wheels), is only six inches in diameter, and one inch wide, and draws two and a quarter square inches of water. We have never used over one-third of a gate, or about three-quarters of asquare inch, to drive all our machinery, our fall being forty (40) feet. Our overshots were each twenty feet in diameter, placed one above the other, and connected by a pinion between them. Your wheel runs one set of cards, one jack of one hundred and eighty-four spindles, two looms, etc., with scant one-third gate. We can do double the amount of work with your wheel that we could with the two overshots it displaced, and we believe that there was never better overshots built than the ones we had.

Our Springs afford only eighty-four gallons of water.

that there was never better overshots built than the ones we had.

Our Springs afford only eighty-four gallons of water per minute, and as the quantity has never varied scarcely one cubic foot per day for years, and as we have known exactly how many pounds of wood we could work up with our overshots, it is clear that we have the best means of judging of the comparative merits of your wheel and the overshots. As to the durability, we have now been running it over four months constantly, although the wheel makes near fourteen hundred revolutions per minute, there has not been the least perceptible wear in any of its par's. We think that the workmanship cannot be surpassed, for it seems to us that it is perfect. We are perfectly satisfied with the change we have made, and give you the above to do as you think proper with.

HOESON & AYLSWORTH.

Manitowac, Wis., 22th ult., 1867.
We, the undersigned, have in use at our Mills, in the town of Cato, one of Leffel's double Turbine Water Wheels. To say that we are pleased with it would express but little of the satisfaction we feel. It more than meets our expecuations, and does all that the manufacturers claim for it.

our expectations, and does all that the manufacturers claim for it.

It gives double power; is small in size; no leakage; cannot be frozen up; and will run with a very low head of water.

LYON & CO.,

Iowa City, Iowa, Oct. 3, 1867.

Nessra Jas. Leffel & Co.,
Gents:—From a sense of duty we subjoin the following:
We this summer put in three (3) of your 40 inch, and one
of your 48-inch wheels, which are running under from five
to six feet head. The 48-inch wheel is driving one run of
4½ burrs, and one fourfeet, grinding from 18 to 20 bushels
per hour.
We consider them far beyond any other wheel in point
of steadiness and convenience, heartly recommending
them as the best we have ever used, and conclude they
cannot be surpassed by any other wheel.
Yours Truly,
CLOSE BRO.
