Value of Extended Patents.

Did patentees realize the fact that their inventions would be likely to be more productive of profit during the seven years of extension than the first full term for which their patents were granted, we think more would avail themselves of the extension privilege. Patents granted prior to 1861 may be extended for seven years, for the benefit of the inventor, or of his heirs in case of the decease of the former, by due application to the Patent Office, ninety days before the termination of the patent. The extended time inures to the benefit of the inventor, the assignees under the first term having no rights under the extension, except by special agreement. The Government fee for an extension is \$100, and it is necessary that good professional service be obtained to conduct the business before the Patent Office. Full information as to extensions may be had by addressing

GREAT VALUE

OF

PATENTS.

PROBABLY no investment of a small sum of money brings a greater return than the expense, incurred in obtaining a patent, even when the invention is but a small one. Larger inventions are found to pay correspondingly well. The names of Blanchard, Morse, Bigelow, Colt, Ericsson, Howe, McCormick, Hoe, and others, who have amassed immense fortunes from their inventions, are well known. And there are hundreds of others who have realized large sums—from fifty to one hundred thousand dollars—and a multitude who have made smaller sums, ranging from twenty-five thousand to fifty thousand dollars, from their patents. The first thing requisite for an inventor to know is, if his invention is patentable. The best way to obtain this information, is either to prepare a sketch and description of the invention, or construct a model, and send to a reliable and experienced patent solicitor, and ask advice. In this connection inventors are informed that

Have been engaged in the business of Soliciting Patents for nearly twenty-five years, and have the most extensive facilities for transacting such business, of any concern in the world. M. & Co. have examined and reported more than

50,000 INVENTIONS,

And prepared the papers for more than

25,000 APPLICATIONS

For Patents during the last quarter of a century.

For the past ten years, the cases filed in the Patent Office by them, are about one third of the entire number of applications filed. Their corps of specification writers and counselors are made up from the ranks of the Patent Office, and are capable of rendering the best service to the inventor, from the experience practically obtained while examiners in the Patent Office.

MUNN & CO.

Offer their services in preparing

Specifications and Drawings for Patents, Caveats, Reissues, Designs, Trade Marks, Extensions, Interferences, and Assignments.

They also prosecute

REJECTED APPLICATIONS,

Which have been improperly prepared by the inventor or incompetent attorneys. Good inventions are often rejected for no other reason than that the cases were not properly presented to the Patent Office. Inventors should bear in mind that Patents are often worth more in foreign countries than in the United States, and the reduced prices for which they are now obtained in England, France, and in other countries, render it within the means of most persons to patent their inventions abroad.
