5 - Dressing Furs. - I wish some cheap way of dressing skins with the fur on, and polishing the hair after the skin is dressed?-J.

6.—Distilling Tar.—How can I distil pine tar so as to separate the grosser parts from the finer? What sort of still should I use,

7.—IMITATION ROSEWOOD MOLDINGS.—How are imitation rosewood moldings made? How is the plaster made to adhere, and how are they finished?-W. S. H.

8.—Potter's Clay.—How is potter's clay mixed and tempered?-G. F. C.

9.—EXPLOSION OF SCRAPPING FURNACE.—An explosion occurred in one of my furnaces recently, which I cannot explain or account for. The furnace is what is known as a cinder bottom scrapping furnace, with water chill inside, built very strongly, in use only two weeks, using mixed hard and soft coal, with blast. It exploded with great violence, just after the heat had been drawn, when the door was open, and when the heator had just taken his rabble out of the water bosh, andthrust it into the furnace, on the cinder bottom. The explosion was similar to the discharge of a cannon, and filled the mill with smoke and steam. The roof of the furnace was lifted, though not blown off, and the nine doors in the boiler wall were all blown open. The heator said no water had been put into the furnace to cool the bottom, as he had been accustomed to do, but explained it as resulting from the contact of a little wet cinder, about the size of a walnut, sticking on to the rabble, and coming in contact with the molten cinder in the furnace. But this explanation did not satisfy me, and as the occurrence was new to me, and very dangerous, and might be very expensive, I desire to ask the cause of the explosion, and the remedy. A similar occurrence happened at one of the large mills here in Reading, on the same day, and a few years since, at Phoenixville, Pa., a furnace was leveled with the ground from the same cause. Water is frequently thrown into the furnace to cool the bottom, without danger, and the heator says an explosion might not happen again in five years with the same treatment. What ex ploded, and what was thecause ?-J. H. S.

10.—SAWING SOFT TIMBER WITH CIRCULAR SAWS.—With what form of teeth-filed square or shearing on top-can the best results be obtained ln sawing softtimber with circular saws?-A. O. B.

11.—Preserving Starch and Paste,—Is there any substance that, when put into boiled starch and flour maste, will preserve the starch and paste in a perfect state for months? Something that will prevent them from souring or watering?

# Becent American and Loreign Latents.

Under this heading we shall publish weekly notes of some of the more prom inent home and foreign patents.

COTTON CHOPPER.-Joseph R. Hood, Wedowee, Ala.-This invention con sists in providing the frame of a cotton chopper with a hoe, arranged in such manner as to work from the side of the frame, for the purpose of thinning out the cotton crop.

WOOD-SPLITTING MACHINE .- Frank Ficht, Dyckeville, Wis .- This inven tion has for its object to furnish an improved machine for splitting cord wood, shingle bolts, and other short wood, and which shall be simple in con struction, effective in operation, and conveniently operated,

CARTRIDGE BELT.-William B. Hayden, Columbus, Ohio.-This invention has for its object to so improve cartridge belts that the same may be revolved, to bring the filled pouches always to the front, and to improve the pouches so that the wads of the several cartridges will be retained in place.

HOLLOW AUGER. - Aaron Bauman and Orin O. Witherell, Toledo, Ohio. -This invention has for its object to furnish an improved hollow auger, which shall be simple and inexpensive in construction, not liable to get out of order, and which shall require less power to operate it than the hollow augers constructed in the ordinary manner.

SPADE.—Harrison Parkman, Philadelphia, Pa.—This invention consists in a spade whose lower end is beveled downward from each outer corner to a central point; which is wider at the lower than at the upper end; which in cross-section is concave on its front and convex on its rear side; and which longitudinally is straight on its rear side, from top to bottom.

WASHING MACHINE. - A. J. Nave, Columbus, Texas. - This invention has for its object to furnish an improved machine for washing wool, clothes, etc., which shall be simple in construction, convenient in use, and effective in operation, being so constructed as to wash the clothes quickly, thoroughly and with very little wear.

INVALID BEDSTEAD.-Dr. William O. Reid, Vienna, N. C.-This invention relates to improvement on the bedstead patented to applicant March 1, 1870, and consists in mechanism whereby the patient is enabled to raise his body into a partially erect position, and otherwise assist himself in various ways without the aid of an attendant.

BIN COVER.—Alonzo S. Maxwell, Dixon, Ill, -This invention relates to improvements in the bin covers made in the form of a segment of a circle, and moving of circular lines in opening and closing, and it consists in pro viding arms for the said covers, which are pivoted at the axis of the curve of the cover, and have curved heads, by which they are attached to the covers; said heads stretching across the ends of the covers at the inner sides in a way to brace and strengthen the covers; and the covers are supported on the pivots of the arms whereon they swing in opening and closing, so that they are held either open or closed, by gravity. The invention also consists in the application to the bins, of casings to prevent the contents of the bins working between the arms and the walls thereof; also a packing to exclude it from the space between the cover and the top of the case.

DRAWER PULL.-Charles H. Pierpoint, West Meriden, Conn.-This inven tion relates to improvements in that class of drawer pulls in which a handle is jointed to a shank projecting from the front of the drawer, to hang in vertical position when not used for pulling the drawer, and it consists in the application to the said handle, of a cushion of india-rubber or other suitable elastic substance, on the part likely to strike against the said drawer front when let fall, to prevent marring or defacing the front, also to prevent noise.

FILE AND BINDER FOR PAPERS, PAMPHLETS, ETC.-J. G. Floyd, Jr., New York city. This invention has for its object to furnish an improved file and binder for filing and binding, temporarily or permanently, papers, pamph lets, and other periodicals, successively, as they are received, and which shall be simple in construction, easily and conveniently manipulated, and will hold the papers securely and without mutilating them, or interfering with their being subsequently bound.

STAMP HOLDER.-Julius Ropes, Ishpeming, Mich.-This invention has for ts object to furnish an improved device for holding postage and internal revenue stamps, designed more especially for use in post offices and other places where stamps are sold at retail, which shall be so constructed that the different denominations will be held distinctly in view, and in such a way that they may be easily and quickly detached when required, and which shall be simple in construction and easily and conveniently operated.

Well Auger. - Eijsh Altman, Hamilton, Mo. - This invention has for its object to furnish an improved well auger, designed more particularly for boring through veins of quicksand, and which shall be simple in construc tion and effective in operation, taking out the water and dirt much cleaner than augers constructed in the ordinary manner.

SETTING FOR STONES AND JEWELS. - William Riker, Newark, N. J.-The object of this invention is to prepare a setting for precious stones and their imitations, in such manner that the gold plates supporting said stones can be completely finished and polished before receiving them and the project ing pins that hold the same in place. The invention consists in the application, to a perforated setting plate, of separate headed setting pins for holding the stone, said pins being applied only after the plate has been entirely finished and polished.

STAMP .- A. M. Darrell, Washington, D. C.-This invention relates to tha class of stamps which indelibly mark an object by burning an impression into it with a heated die; and the object of the invention is to so improve the stamp that it shall be self-heating, and at the same time be neat, dura ble, cheap, and convenient, the heating apparatus being as capable of adaptation to small hand stamps as to the larger classes of spring stamps, etc.

ROACH AND BUG TRAP.-Thomas Williams, Tompkinsville, N. Y.-This invention consists in applying to the lower edge and outer side of the suspended funnel an annular flange, which constitutes a trough, in Which liquid for preventing the escape of the animals may be contained.

FEED-WATER HEATER.-E. L. Jones, Memphis, Tenn.-This invention reates to improvements in feed-water heaters for steam boilers, and consists in a pipe or pipes arranged to traverse the furnace chamber, through which pipes water is supplied to the boiler by a force pump, and in which a current may be maintained when the pump has ceased its operation.

FOLDING DESK .- John Milwain, Nashville, Tenn. - This invention relates to improvements in folding school desks, and it convists a combination with the folding table of the desk, of a strip or plate for clofing the opening at the point where the table is folded down, and an arrangement of the pivot points, bracing arms, and guide grooves, for the latter, for operating the table, so as to effect the said closing of the joint, so that when the table is folded down, the book case beneath will be closed dust proof.

WASHING MACHINE.-E. P. Brown, Thomasville, Ga.-This invention relates to improvements in washing machines, and consists of two sets of rollers, each mounted in a frame, with spaces between them, one set arranged above the other, both in a rectangular case, and connected to a vibrating working bar, so that they will move simultaneously in opposite directions, the rollers of the upper set rolling up and down over the lower ones, and acting on the clothes placed between the two sets. The invention also comprises the application to the upper set of a spring for increasing the pressure on the clothes.

SPOKE-TENONING MACHINE. - Godfrey E. Culp and Matthew Flaig, Lock haven, Pa. - This invention consists in an improved machine for tenoning spokes for wagon wheels; and consists in a peculiar construction and ar rangement of parts, for effecting the operation in a rapid, neat, and effec-

STUFFING BOX FOR ENGINES. - Joel A. H. Ellis, Springfield, Vt. - This invention has for its object to prevent the escape into the atmosphere of vapor around the piston and valve rods, and the escape of the fluid from which the vapor is produced around the plunger of the force pump that supplies vapor generators.

a furnace and steam engine, for the purpose of vaporizing gasoline or other volatile substance used in a vapor engine.

MEDICAL COMPOUND.—Rebecca Gilkinson, New York city.—This invention and discovery relates to a new and useful improvement in a liniment for curing rheumatism and similar disease

DUST FLUE DAMPER.-James M. Frear. Pittstown. Pa.-The object of this invention is to obtain convenient and easy access to the bottom flues of stoves and ranges tor the purpose of cleaning the same, and also to create an under draft for carrying off the ashes and dust which rise when raking or shaking the grate.

COMPOUND FOR VAPOR GENERATORS .- J. A. H. Ellis, Springfield, Vt. This invention relates to a new compound fluid to be used in the vapor generators of vapor engines.

SALT CELLAR.-John T. Walker, Brooklyn, N. Y .- This invention relates to a new salt cellar, which is provided with a clamping spring to be readily

attached to and detached from the edge of a plate.

Grate for Furnaces.—Alfred Dart, Carbondale, Pa.—In this invention, the fuel is fed upon a grate set at an inclination of about 45 degrees, and provided with a corrugated cover, whereby the fuel is kept in a thin stratum and in a state of thorough and nearly uniform combustion.

SEWING-MACHINE MOTOR. - William C. Thornton and James D. Cooley. Hillsville, Va. - This invention relates to a stop-mechanism for sewingmachine motors, whereby the motion of the motor may be arrested instantly and at any desired morr ent.

SOLUTION AND PROCESS FOR EMBALMING. - Dr. Benjamin F. Lyford. San Francisco, Cal. —This invention relates to a new compound for use in embalming, and a peculiar process of preparing and applying the same, whereby animal bodies may be perfectly preserved without appreciable deterioration for an indefinite period.

APPARATUS FOR PRESERVING MEATS, FRUITS, ET icholas H. Shipley. Baltimore, Md.—In this invention an apparatus is provided for simultane ously exhausting the air from any number of vessels, with or without the application of heat thereto, for the purpose of scientific experiments, and for domestic use in preserving meats, fruits, vegetables, etc. The apparatus is also designed for the substitution of gases in place of the air exhausted

and for the application of heat or cold to the vessels during the process.

COMBINED TAPE MEASURE AND SCREW DRIVER.—Moses W. Dillingham, Amsterdam, N. Y.—This invention relates to a new and useful improvement in a combination of well-known and useful articles more especially designed for undertaker's use, and it consists in combining with the pocket tape measure a screw driver and an awl, arranged to operate from a tube connected with the case of the tape measure.

DETACHABLE TACKLE BLOCK .- George Stancliff, New York city .- This is chiefly applicable to davits for suspending boats from the sides of a vessel, and for permitting the rapid detachment of the same, but may also be used for other purposes.

## Official List of Latents. ISSUED BY THE U.S. PATENT OFFICE.

FOR THE WEEK ENDING JAN. 31, 1871.

Reported Officially for the Scientific American.

SCHEDULE OF PATENT FEES

For Copy of Chain of any Patent issued within 30 years. \$1. A sketch from the model or drawing, relating to such portion of a machine as the Claim covers, from the price abone-named.

The full Specification of any patent issued since Nov. 20, 1866, at which time the Patent Office commenced primting them. \$1.20 Official Copies of Trawings of any patent issued since 1886, we can supply at a returnable coat, the price depending upon the amount of tabor involved and the number of views.

Full information, as to wrice of drawings, in each case, may be had by addressing

#### MUNN & CO., Patent Solicitors, 37 Park Row, New York.

#### TRADE-MARKS.

#### Advertisements.

The value of the Scientific American as an advertising medium cannot be over-estimated. Its circulation is ten times greater than that of any similar journal now pub lished. It goes into all the States and Territories, and is read in all the principal libraries and reading-rooms of the world. We invite the attention of those who wish to make their business known to the annexed rates. A busi ness man wants something more than to see his adver tisement in a printed newspaper. He wants circulation.
If it is worth Z cents per line to advertise in a paper of three thousand circulation, it is worth \$2.50 ver line to advertise in one of thirty thousand.

RATES OF ADVERTISING.
Back Page - - - 1.00 a line,
Inside Page - - . 75 cents a line, for each insertion.

Engravings may head advertisements at the same rate per line, by measurement, as the letter-press.

"A series of very interesting and instructive articles." - Rouser Bonnes, in New York Ledger.
Only Pitty Cents, of Bookeasthander.

Only Pitty Cents, of Booksellers or by mail.

JESSP, HANEY & CO., 119 Nassau st., N.Y.

#### Patents on Designs.

Citizens and aliens can now score design patents for three and a half, seven, and fourteen years. The law on this subject is very liberal. Foreigners, designers, and manufacturers, who send goods to this country, may se-cure patents here upon their new patterns, and thus pre-vent other makers from selling similar goods in this mar-ket. these patents cover all novelties of form or configura-

These parents cover an investment of a five tion of a five less of manufacture.
