#### APPLICATIONS FOR EXTENSION OF PATENTS.

METHOD OF SECURING THE DOORS OF HAY PRESSES, ETC.-Cornelius Martratt, Waterford, N.Y., has petitioned for an extension of the above patent Day of hearing, April 5, 1871.

GRINDING SAWS.-Daniel S. Nippes, Upper Merion Township, Pa., has p titioned for the extension of the above patent. Day of hearing, April 5, 1871. WHIFFLETREE HOOKS.-Ann M. Cooley, Ceresco, Mich., has petitioned for

an extension of the above patent. Day of hearing, June 14, 1871. MACHINE FOR MAKING PAPER BAGS .- Roxanna Rice, South Lancaster Mass., has petitioned for an extension of the above patent. Day of hearing

April 12, 1871. SEWING MACHINE.-James E. A. Gibbs, Steels Tayern, Va., has petitioned

tor an extension of the above patent. Day of hearing May 17, 1871. HARVESTERS.-Charles Crook, New Hope, Pa., has petitioned for an ex

tension of the above patent. Day of hearing, April 19, 1871. CORN HUSKERS.-Evelyn F. French. New York city, has petitioned for an extension of the above patent. Day of hearing, April 26, 1871.

New Patent Law of 1870.

# INSTRUCTIONS

HOW TO OBTAIN

New Inventions.

Information about Caveats, Extensions, Interferences, Designs, Trade-Marks, and Foreign Patents.

OR Twenty-five years, MUNN & Co. have occupied the leading position of Solicitors of American and European Patents. During this long experience they have examined not less than Fifty Thousand Inventions, and have presented where the second THOUSAND APPLICATIONS FOR FATENTS. In addition to this they have made, at the Patent Office, Twenty-Five Thousand Special Se Examinations into the novelty of various Inventions. ୍ତ The important advantage of Munn & Co.'s American and Eu-

ropcan Patent Agency is that the practice has been tenfold greater than that of any other agency in existence, with the additional advantages of having the aid of the highest professional skill in every department and a Branch Office at Washington, that watches and supervises cases when necessary, as they pass through Official Framination.

### MUNN & CO., Ask Special Attention to their System of doing Business.

#### Consultation and Opinions Free.

Inventors who desire to consult with MUNN & Co. are invited to call at their office 37 PARK Row, or to send a sketch and description of the invention, which will be examined and an opinion given or sent by mail without charge.

#### A SPECIAL EXAMINATION

is made into the novelty of an invention by personal examination at the Patent Office of all patented inventions bearing on the particular class. This scarch is made by examiners of long experience, for which a fee of \$5 is charged. A report is given in writing.

To avoidall possible misapprehension, MUNN & Co. advise generally, that inventors send models. But the Commissioner may at his discretion dispense with a model-this can be arranged beforehand.

MUNN & Co. take special care in preparation of drawings and specifications, If a case should for any cause be rejected it is investigated immediately, and the rejection if an improper one set aside.

#### NO EXTRA CHARGE

ismade to clients for this extra service. MUNN & Co. have skillful experts in attendance to supervise cases and to press them forward when necessary. REJECTED CASES.

MUNN & Co. give very special attention to the examination and prosecution of rejected cases filed by inventors and other attorneys. In such cases a fee of \$5 is required for special examination and report; and in case of probable success by further prosecution and the papers are found tolerably well pre-pared, MUNN & Co. will take up the case and endeavor to get it through for a reasonable fee to be agreed upon in advance of prosecution.

#### CAVEATS

Are desirable if an inventor is not fully prepared to apply for a Patent. A Caveat affords protection for one year against the issue of a patent to another for the same invention. Caveat papers should be carefully prepared. The Government fee on filing a Caveat is \$10, and MUNN & Co.'s charge for preparing the necessary papers is usually from \$10 to \$12.

#### REISSUES.

A patent when discovered to be defective may be reissued by the surren der of the original patent, and the filing of amended papers. This proceeding should be taken with great care.

#### The Advertisers' Gazette

Contains much information of value to every one who advertises in news papers. Geo. P. Rowell & Co., the New York Advertising Agents, are the publishers. Sample copy sent to any address for 25 cents.

## Becent American and Loreign Latents.

Under this heading we shall publish weekly notes of some of the more prom inenthome and foreign patents.

MEDICAL COMPOUND.-Henry Lister, Houston, Texas.-This invention and discovery relates to a new and valuable remedy for chills and fever, and consists in the use of what is commonly known as iron weed (botanical name, "verbena ursicifolia") macerated and combined with alcohol.

ARTIFICIAL LEG.-James E. Hanger, Staunton, Va.-This invention re lates to improvements in the construction of artificial legs, and it consists in certain arrangements of the knee, ankle, and toe joints, which are designed to provide more efficient and durable legs than those now in use.

LEACHING APPARATUS.-H. C. Crowell, Morgan, Ohio.-This invention relates to a new and useful improvement in apparatus for leaching bark in the process of tanning leather, and for all other similar purposes, and it consists in warming and producing a circulation of the liquid by means of a current of steam.

Ash SIFTER.-William Weaver, Greenwich, N. Y.-This invention has for its object to furnish an improved sifter for sifting ashes, coals, and other substances, which shall be so constructed as to prevent the escape of dust or ashes, thus adapting it for use in a room, yard, or other place where the dust would be a nuisance, and which shall at the same time be simple in construction, and conveniently operated.

STEP AND TRAM BOX .- William G. Norment, Dyersburgh, Tenn .- This invention relates to a new and useful improvement in step boxes for supporting and adjusting the step ends of mill spindles and upright shafts, and consists in a sectional step box, the sections of which box are so arranged on the step point of the spindle or shaft that the step end of the spindle or shaft may be moved laterally by means of a series of set screws.

COMBINED KEY 'RING AND DOOR FASTENER.-Bryant H. Melendy, Man chester, N. H.-This invention has for its object to improve the construction of the improved key ring and door fastener, patented by the same inventor May 17, and July 19, 1870, and numbered 103,068 and 105,474, so as to make it lighter, stronger, smaller, and better, and thus more convenient and effective in use.

POST HOLE DIGGER. - A. E. Lindsley, Paw Paw, Mich. -- This invention relates to a new instrument for digging the holes for fence posts and other purposes, and consists in the application of a circular cutter and vertically adjustable clamping block, by which the earth or sand is secured in the tubular case on which the cutter is formed.

COFFEE MILL.-Francois Raymond, Woodhaven, L. I.-This invention relates to improvements in coffee mills, and it consists in an improved con-struction of the stationary grinder, and the hopper and rotary grinder support calculated to simplify and cheapen the cost of attaching the parts to the box top, and together, as hereinafter described.

CORN PLANTER.-J. M. Parsons, Charles City, Iowa.-This invention has for its object to furnish a convenient and reliable corn planter, which shall be so constructed that one man with two horses can plant the corn, two rows at a time, in accurate check row, upon ground just as it is left by the plow, and without its being marked or staked out.

WASHING MACHINE.-W. G. Jones, Marshall, Texas.-This invention has for its object to furnish an improved washing machine, which shall be so constructed as to do its workquickly and thoroughly, however soiled the garments may be, and which will wash the most delicate fabrics without injuring them.

BEDSTEAD.-George Snowden, Hudson, N. J.-This invention relates to a new construction of bedstead frame and bed bottom, and has for its object to provide an elastic couch, and reduce the expense of making the same.

REVERSIBLE BRotLER.-Levi H. Colborne and David H. Lowe, New York city.-This invention has for its object to furnish an improved broiler, which shall be so constructed as to catch and preserve the gravy, and allow the substance being broiled to be reversed or turned without removing the broiler, or allowing the gravy to run into the fire, and which shall at the same time be simple in construction, and convenient in use.

HAY RAKE AND LOADER.-John E. Fell and John H. Mattocks, Maquoketa, Iowa.—This invention has for its object to furnish a simple and convenient machine, that may be conveniently attached to the rear part of the wagon upon which the hay is to be loaded, and which will rake or collect the hay, and raise and deposit it upon the said wagon.

CULTIVATOR.-Marshall Sattley, Taylorville, Ill.-This invention has for is object to furnish an improved cultivator, simple in construction, strong, lurable, not liable to get out of order, and effective in operation.

COMBINED FENDER AND GAGE WHEEL. - Alexander B. Thornton, New Berlin, Ill.-This invention has for its object to furnish an improved fender for protecting the plants from being covered and injured by having too much dirt thrown around or over them, and which shall at the same time be so constructed as to serve as a gage wheel to regulate the depth at which the plow works in the ground.

Apparatus for Charging Woods with Preserving Liquids.--Wm. H. Smythe, Steubenville, Ohio.—This invention relates to improvements in apparatus for forcing preserving liquids into woods, and it consists in a combination of an air pump, liquid receptacle, and compression chamber, and an attaching device for connection to the wood or to a tank adapted for the employment of compressed air, or other equivalent gases for forcing the liquids in.

BLIND REGULATOR.-John T. O'Donoghue and Alex. Leavitt, New York clty.-This invention relates to improvements in window blinds, and it consists in the application, to one or more of the slats, of a notched wheel, and one or more spring holding pawls to the stile, for holding the slats in any position in which they may be set, by turning them on their bearings, for closing or opening, to exclude or admit the light.
