#### Advertisements.

Advertisements will be admitted on this page at the rate of \$1.00 per line for each insertion. Engrvings may head advertisements at the same rate ver line by measurement, as the letter-press.

The value of the Scientific American as an advertising medium cannot be over-estimated. Its circulation is te times greater than that of any similar journal now published. It goes into all the States and Territories, and is read in all the principal Horaries and reading-rooms of the world. We invite the attention of those who wish to make their businessknown to the annexed rates. A business man wants something more than to see his advertisement in a printed newspaper. He wants eirculation. If it is worth 35 cents per line to advertise in a paper of three thousand circulation, it is worth \$3.75 per line to advertise in one of forty-five thousand.

GENTS WANTED.—Address LATTA & CO., Pittsburgh, Ps. Α

### The Fisher & Norris Eagle Anvil Works, Box 775, New York City. Advertising Agent. Address

(ESTABLISHED 1843.) 

These Anvils are manufactured at the oldest Anvil Factory in this country, and for the past twenty-five years have maintai ed an excellent reputation among Blacksmiths, Machinists, Tool Makers, &c. They are superfor to the best English, or other Anvils, on account of the peculiar process of their manufacture (invented, and used only by this concern); and from the quality of the materials employed.

The working surface is in one piece of Jessur's Best Tool. Cast Steel, which, after being accurately ground, is hardened and given the Proper ismper for the heaviest work. The horn is covered with and its extremity made entirely of steel. The body of the Anvil is of the strongest grade of American iron, to which the cast steel face is varrawised to be thoroughly weided and not to come off.

The best of English anvils, after a time, become hollowing on the face by continued hammering in use, on account of the fibrous nature of the wrought iron—causing it to "settle" under the face.

The body of the Eagle Anvil being of crystalized iron, no such settling can ever occur; and the steel face, therefore, remains perfectly true. Also, it has the great advantage, that being of a more soil material, and with less rebound, the piece forged receives the full effect of the hammer, instead of a part of the blow being wasted in rebounding, as is the caste from a wrought from anvil. An equal amount of work can, therefore, be done on this Anyil with a hammer one fifth lighter than that required when using a wroughtiron anvil which is more elastic.

FISHER & NORRIS manufacture to special order, Anvils for Saw Makers, Aze Makers, Aze Makers, &c. also, Copper Smiths', Silver Smiths' and Tin man's Stakes and Blocks, with hardened and polished cast steel facts; also, the well known Parallel Chain Vises. Sold by: New York—Messers. Clark, Wilson & Co.; Russell & Erwin Manufacturing Company; Durrie & Rusher. Boston—George H. Gray & Danforth. Philadelphia—James C. Hand & Co. Estlimore—W. H. Cole.
