

Business and Personal,

The Charge for Insertion under this head is One Dollar a Line for each insertion. If the Notice exceeds Four Lines, One Dollar and a Half per Line will be charged.

If you want a complete collection of the best recipes and trade hints published in Scientific American for past 10 years, send \$1.50 to H. N. Munn, 37 Park Row, New York, for Wrinkles and Recipes. 250 pages, splendidly illustrated.

Agricultural Implements and Industrial Machinery for Export and Domestic Use. R.H. Allen & Co., N. Y.

Town and Village Hand Fire Engines, with hose carriage and fittings, only \$350. Send for cuts and full information. S. C. Forsyth & Co., Manchester, N. H.

See advertisement of Industrial Mfg. Co., p. 349.

For durability and economy, use Blake's Belt Studs to fasten Belts. Greene, Tweed & Co., 18 Park Place, New York.

Split-Pulleys and Split-Collars of same price, strength and appearance as Whole-Pulleys and Whole-Collars. Yocum & Son, Drinker St., below 147 North Second St., Philadelphia, Pa.

To Lease—The largest portion of the building corner Canal, Center, and Walker Sts., now occupied as a Billiard Manufacturing and Sales Room. See advertisement in another column.

The Cabinet Machine—A Complete Wood Worker. M. R. Conway, 222 W. 2d St., Cincinnati, Ohio.

The Gatling Gun received the only medal and award given for machine guns at the Centennial Exhibition. For information regarding this gun, address Gatling Gun Co., Hartford, Conn., U. S. A.

Journal of Microscopy—For Amateurs. Plain, practical, reliable. 50 cents per year. Specimens free. Address Box 4875, New York.

For Sale—Shop Rights to every Tool Builder and manufacturer for Bean's Patent Friction Pulley Counter-shaft. D. Frisbie & Co., New Haven, Conn.

Superior Lace Leather, all Sizes, Cheap. Hooks and Couplings for flat and round Belts. Send for catalogue. C. W. Army, 148 North 3d St., Philadelphia, Pa.

Magic Lanterns, Stereopticons, for Parlor Entertainments and Public Exhibitions. Pays well on small capital. 74 Page Catalogue free. Centennial Medal and Diploma awarded. McAllister, 49 Nassau St., N. Y.

Noiseless Exhaust Nozzles for Exhaust Pipes and Pop Valves. T. Shaw, 915 Ridge Av., Phila., Pa.

Fire Hose, Rubber Lined Linen, also Cotton, finest quality. Eureka Fire Hose Co., 13 Barclay St., New York.

Shingle, Heading and Stave Machine. See advertisement of Trevor & Co., Lockport, N. Y.

The Scientific American Supplement—Any desired back number can be had for 10 cents, at this office, or almost any news store.

To stop leaks in boiler tubes, use Quinn's Patent Ferrules. Address S. M. Co., So. Newmarket, N. H.

Water, Gas, and Steam Pipe, Wrought Iron. Send for prices. Ballev, Farrell & Co., Pittsburgh, Pa.

For Solid Wrought-iron Beams, etc., see advertisement. Address Union Iron Mills, Pittsburgh, Pa. for lithograph, &c.

Solid Emery Vulcanite Wheels—The Solid Original Emery Wheel—other kinds imitations and inferior. Caution.—Our name is stamped in full on all our best Standard Belting, Packing, and Hose. Buy that only. The best is the cheapest. New York Belting and Packing Company, 37 and 38 Park Row, New York.

500 new and second hand machines at low prices, fully described in printed lists. Send stamp, stating just what you want. S. C. Forsyth & Co., Manchester, N. H.

Hand Fire Engines, Lift and Force Pumps for fire and all other purposes. Address Rumsey & Co., Seneca Falls, N. Y., U. S. A.

More than Ten Thousand Crank Shafts made by Chester Steel Castings Co., now running; 8 years' constant use prove them stronger and more durable than wrought iron. See advertisement, page 349.

See Boulton's Paneling, Moulding, and Dovetailing Machine at Centennial, B. 8-55. Send for pamphlet and sample of work. B. C. Mach'g Co., Battle Creek, Mich.

M. Shaw, Manufacturer of Insulated Wire for galvanic and telegraph purposes, &c., 259 W. 27th St., N. Y.

F. C. Beach & Co., makers of the Tom Thumb Telegraph and other electrical machines, have removed to 580 Water Street, New York.

Safety Linen Hose for Factories, 1 to 3 inches, at reduced rates. Greene, Tweed & Co., 18 Park Place, N. Y.

Hyatt & Co.'s Varnishes and Japans, as to price, color, purity, and durability, are cheaper by comparison than any others extant. 246 Grand St., N. Y. Factory, Newark, N. J. Send for circular and descriptive price list.

Power & Foot Presses & all Fruit-can Tools. Ferracute Wks., Bridgeton, N. J. & C. 27, Mch. Hall, Cent'l.

For Solid Emery Wheels and Machinery, send to the Union Stone Co., Boston, Mass., for circular.

For best Presses, Dies, and Fruit Can Tools, Bliss & Williams, cor. of Plymouth and Jay, Brooklyn, N. Y.

Steel Castings, from one lb. to five thousand lbs. Invaluable for strength and durability. Circulars free. Pittsburgh Steel Casting Co., Pittsburgh, Pa.

Hydraulic Presses and Jacks, new and second hand. Lathes and Machinery for Polishing and Buffing metals. E. Lyon, 470 Grand Street, New York.

Diamond Tools.—J. Dickinson, 64 Nassau St., N. Y.

Slide Rest for \$8 to fit any lathe. Goodnow & Wightman, 23 Cornhill, Boston, Mass.

"Dead Stroke" Power Hammers—recently greatly improved, increasing cost over 10 per cent. Prices reduced over 20 per cent. Hull & Belden Co., Danbury, Ct.

The "Abbe" Bolt Forging Machines and the "Palmer" Power Hammers a specialty. Send for reduced price lists. S. C. Forsyth & Co., Manchester, N. H.

Notes & Queries

A. J. can polish starched linen goods by following the directions on p. 203, vol. 31.—C. W. will find a description of a calcium light on p. 219, vol. 30.—C. K. R., will find directions for making friction matches on p. 75, vol. 29.—C. F. will find directions for hardening millpicks on p. 170, vol. 25.—M. W. can make vinegar by the process described on p. 106, vol. 32.—A. B. R., C. W., B. L., J. K., J. C. M., E. T. H., F. W., and others, who ask us to recommend books on industrial and scientific subjects, should address the booksellers who advertise in our columns, all of whom are trustworthy firms, for catalogues.

(1) W. H. L. asks: Does a person, in lifting one wheel of a 4-wheeled wagon off the ground, lift more or less than a quarter of the whole weight? A. More than a quarter if the vehicle is rigid and the load equally distributed.

(2) A. Y. asks: Is there any practical way of leveling without a theodolite? A. You can construct an instrument with an ordinary builder's level, that will enable you to get the high. As such matters are discussed in special treatises, and would occupy too much space for these columns, we must refer you to some good book on the subject. There is a cheap level in the market, which is accompanied by full directions for use.

(3) A. C. F. asks: What is the proper speed for grindstones, wet and dry? A. Circumferential velocity, 1,800 to 2,000 feet per minute.

I have a 10 horse power locomotive boiler; it will hardly make steam enough for a 10 horse power engine. Would it be practicable to wall in the boiler and form an arch over the top, arranging it to lead the heat (after leaving the flues) under the boiler towards the firebox, along the side of the firebox toward the front, then up and over the top of the boiler, back to rear end, and up the stack? A. If you have a strong draft, you may gain something by the change.

(4) T. P. F. asks: If two launches were built, one 30 and one 40 feet long, the same in every particular except length, which would run the fastest? A. The first.

(5) B. P. R. asks: 1. In a hot blast or air-tight steam boiler furnace, which is the best way to supply the air, under the grates or on top of the burning coal? A. Under the grates. 2. How many lbs. steam to the square inch will a boiler 24 feet long by 40 inches diameter, of 3/4 inch iron, stand with safety? A. About 60 lbs. 3. What dimensions of smoke stack ought I to have for the boiler, with two flues, each 14 inches in diameter? A. The cross section of the chimney should not be less than about 1/2 of the grate surface.

(6) J. S. C. asks: Is the statement that a body will weigh less at the equator than at the poles based on an actual test by weighing, or is it theoretical? A. Based on actual test.

(7) C. F. S. asks: 1. How large a boat will a boiler 44 inches high and 20 inches in diameter, and an engine with 3 1/2 inches stroke and about 3 1/2 inches bore, drive, and at what speed? A. The machine will be suitable for a boat from 18 to 30 feet long. 2. What size of wheel and what pitch should I use? A. Use one 20 or 24 inches in diameter with 3 feet pitch.

Where does ice form in freezing, on top or at bottom of the water? A. You can probably settle the matter to your satisfaction by observations on a pond in which ice forms. First there will be a thin sheet of ice, which gradually thickens on the under side.

(8) J. K. asks: Why will not iodide of potassium form in large crystals when made according to United States Pharmacopoeia? A. In order to obtain good crystals of KI, it is necessary that the crystallization should proceed as slowly as possible in a cool place, and under a good vacuum. The best results are obtained when large quantities of the materials are operated upon at once. The solution of the iodide should be as neutral as possible.

(9) M. asks: 1. Is the common commercial potash in solution a good fertilizer for a grape vine when applied to the soil about its roots? If so, of what strength should it be used? A. We would not recommend the use of potash. 2. Are ground or pulverized bones good for the same purpose? A. The finely-ground bones mixed with soil or peat make a very desirable manure. It would be better, however, to treat the ground bones with about one third the weight of oil of vitriol (specific gravity 1.70) in order to obtain the soluble superphosphate. The acid should be diluted with about 2 parts of water, and well stirred in with the bone dust; it should then be allowed to stand for about 12 hours, when enough loam should be stirred in to absorb all the liquid. This is one of the best manures known. 3. If these articles were applied to a loamy or porous soil, situated 10 feet from a well of water, would there be any danger of contamination to the water? A. No.

(10) E. M. L. asks: In cutting up tortoise-shell, a lot of small scraps are made. How can they be worked up into a solid mass, by dissolving, or otherwise? A. The larger scraps might possibly be utilized for small inlaid work. Send us a few of the scraps and we may possibly be able to suggest some other application.

(11) W. S. C. asks: What produces the phosphorescent light known as fox fire? A. We do not recognize the name, but suppose you refer to the strongly phosphorescent solution of phosphorus in hot olive oil. Bisulphide of carbon or one of the essential oils may be made to replace the olive oil as the solvent. It would, perhaps, be well to state that the employment of the bisulphide solution of phosphorus is liable, when the liquid is in contact with the air, to produce spontaneous combustion.

(12) S. W. J. asks: What is a simple and harmless preparation for turning dirty brownish red hair to a white color? A. There are methods by which this might be accomplished, but we cannot recommend any of them.

(13) F. S. M. asks: Which is the best way to make a solution for silverplating? I have made a solution, but the silver comes off again. I made it by dissolving some silver in nitric acid; and after making the salt dry, I put it in a solution of cyanide of potassium (K Cy) in water. It plates very well; but when I come to burnish it, it all comes off again. A. Your method of pre-

paring the solution is a good one; the trouble doubtless arises from the inefficient manner of preparing the articles. Different metals require different treatments. As a rule, the first thing to be done is to remove the greasy films with which most objects are covered; this is effected by boiling and rubbing in a solution of caustic soda, made by boiling about 2 lbs. of common soda crystals with milk of lime, produced by slacking 1/2 lb. of quicklime with hot water, and well stirring. After this alkaline bath, the objects should be washed in several waters or in a running stream. They are next cleaned in acids, again washed, and then transferred to the depositing solution. Copper, brass, and German silver articles should be immersed in a pickle composed of water 100 parts, oil of vitriol 100 parts, nitric acid (specific gravity 1.3), 50 parts, hydrochloric acid 2 parts. It is well also to coat the surface with a thin film of mercury. This is effected by means of a solution of 1 oz. mercury in sufficient nitric acid, with three times the quantity of water, diluted to one gallon; there will form a gray or blackish deposit over the surface, which, on brushing softly, gives place to a brilliant coating of mercury; the object should be transferred to the depositing cell the instant this is obtained.

(14) J. McJ. asks: What will remove dried colodion from white cotton, without injuring the fabric? If there is anything that will decompose it, it will be preferable to a solvent. A. Try steeping the cloth in cold water, and then rubbing it together so as to break up the films.

(15) A. C. asks: How thick should the copper and zinc plates be, and of what thickness should the wire be, of the galvanic battery mentioned on p. 234, vol. 34? A. The plates may be made of any convenient thickness. No. 14 or 16 copper wire is used for the connections. 2. How should the zinc be suspended? A. From a wooden or metallic frame resting on the top of the jar.

(16) G. B. McC. asks: Is it possible for the water to be carried out of the boiler through the pump? We were sawing with a portable steam mill, and shut down at night with the usual amount of water. In the morning there was no water in the boiler, and we had to fill her up through the safety valve. There is a check valve on the feed pipe close to where the pipe connects with the boiler. A. It would not be possible, if the check valve were tight, which, judging from your account, might not have been the case.

(17) A. H. asks: 1. Please give me full directions for making a good condenser for an induction coil. A. Cut tin foil up into sheets of the desired size, and make of them two piles like the leaves of a book, one pile containing one more sheet than the other. Upon the extreme end of each of these piles place a tinned wire or strip of metal, and by means of a soldering iron run all the edges together so as to make a perfect metallic connection. Cut sheets of paper large enough to allow a margin of at least an inch round three sides of the foil. The paper should be thin, not highly glazed, and should show no acid reaction by reddening when moistened with a neutral solution of litmus; it should be baked thoroughly dry, placed in a vessel of paraffin kept well over its melting point, and then drained sheet by sheet as smoothly as possible. A well baked piece of wood somewhat larger than the paper is laid upon a table, its face soaked with paraffin and a sheet or two of paper laid upon it; upon this is laid the largest pile with its soldered end projecting, and all its leaves turned back except the lowest one, which is to be rubbed smoothly out on the paper; lay over this two sheets of the paper, and on top of this the other book of foil, so placed that it lies exactly over the first sheet except for the margins at the opposite ends; turn back, as with the other, all its leaves except the first, and upon this place two sheets of paper; continue this process, laying back, upon the paper, sheets of foil from the books alternately, and between each foil two sheets of paper. When all are in place, cover with two or three sheets of paper and a board like the first; the whole should then be compressed by clamps and warmed up to the melting point of paraffin, increasing the pressure to drive out all excess. The first board should be provided with a binding screw at each end, and the wire of the corresponding foils should be soldered to it. 2. Which will produce the best result, 3 lbs. silk-covered wire No. 37, or 5 lbs. No. 32? A. Three pounds of No. 37 will give the longest spark.

(18) A. D. asks: 1. Does the addition of glass to lead make it ring like silver? A. The product is quite sonorous. 2. Will glass combine with lead? A. Oxide of lead is soluble in molten glass.

(19) L. B. & Co. asks: What will hold up soapstone in solution? A. Such rocks can only be rendered soluble by fusion with alkalies or alkaline carbonates in excess, and subsequent treatment with boiling water and acids. The rock (in small quantities) may be partially decomposed and dissolved by means of strong hot solutions of hydrofluoric and sulphuric acids.

(20) S. asks: What degree of heat is necessary to make brass malleable, so that it can be hammered or drawn out? A. It is generally drawn cold, being previously annealed.

MINERALS, ETC.—Specimens have been received from the following correspondents, and examined, with the results stated:

We have received minerals as follows, in packages without names of senders: Two specimens of micaceous red hematite, an excellent ore of iron. Two specimens of clay of good quality, a mixture of finely divided silica and silicate of alumina, which might be employed in polishing, in

making some varieties of vitrified wares etc.—A. E.—It is argite, and contains some oxide of iron.—W. E. T.—They are both iron pyrites, and contain no precious metal.—N. V. C.—It is brown coal.

COMMUNICATIONS RECEIVED.

The Editor of the SCIENTIFIC AMERICAN acknowledges, with much pleasure, the receipt of original papers and contributions upon the following subjects:

- On the Centennial Awards. By G. B. On Sound. By J. A. F. On Foul Air in Wells. By M. B. O'N. On the Moon. By J. D. On Cutting Speeds. By T. J. B. On Trisecting an Angle. By J. McM. On Smoky Chimneys. By F. G. W.

Also inquiries and answers from the following: B. D.—G. B. P.—L. H. E.

HINTS TO CORRESPONDENTS.

Correspondents whose inquiries fail to appear should repeat them. If not then published, they may conclude that, for good reasons, the Editor declines them. The address of the writer should always be given.

Enquiries relating to patents, or to the patentability of inventions, assignments, etc., will not be published here. All such questions, when initials only are given, are thrown into the waste basket, as it would fill half of our paper to print them all; but we generally take pleasure in answering briefly by mail, if the writer's address is given.

Hundreds of inquiries analogous to the following are sent: "Who sells paraffin? Who sells gutta percha? Who sells crude India rubber? Who sells proprietary stamps? Who sells the best astronomical telescopes? Whose is the best aneroid barometer?" All such personal inquiries are printed, as will be observed, in the column of "Business and Personal," which is specially set apart for that purpose, subject to the charge mentioned at the head of that column. Almost any desired information can in this way be expeditiously obtained.

[OFFICIAL]

INDEX OF INVENTIONS

FOR WHICH Letters Patent of the United States were

Granted in the Week Ending

October 17, 1876,

AND EACH BEARING THAT DATE.

[Those marked (r) are reissued patents.]

A complete copy of any patent in the annexed list, including both the specifications and drawings, will be furnished from this office for one dollar. In ordering, please state the number and date of the patent desired, and remit to Munn & Co., 37 Park Row, New York city.

Table listing inventions and their patent numbers, including items like Adding machine, Advertising ribbon reel, Agricultural steamer, Alarm and fire extinguisher, Apple parer, Ash sifter, Bale tie, Bale tie, manufacture of, Band-cutting shears, Barrel truck, Base burning stove, Bed bottom, Belts, cutting and punching, Bill file, Billiard table attachment, Blacking distributor, Blower, Bottle and cup stopper, Bottle faucet, Bougie, Bracelet, Breast strap fender, Breech-loading fire arm, Broom handle, Brush handle, Buckle, Burglar alarm, Butter dish, Buttonhole attachment, Calculator, Candle lamp, Car axle bearing, Car coupling, Car coupling, F. F. Wheeler, Car starter, Car safety appliance, Carbureter, Case for metal sheets, Check-rowing corn, Chimney flue, Chimney top and ventilator, Churn, Cloth, preserving bolting, Cloth-cutting machine, Clothes pounder, Coffee and tea pot, Coffeepot, Cotton and corn planter, Cotton, device for picking, Cotton harvester, Cotton press, Cottonseed drill, Cradle, Crib attachment for bedsteads, Cultivator, Cultivator, C. R. Hartman, Cultivator, E. Pratt, Cultivator and sulky plow, Curry comb, Curtain fixture, Cutter heads, balancing revolving, Desk and sewing machine cover, Desk attachment for chairs, Diamonds, cutting, Die and shoe for quartz mills, Disinfecting water closets, Domestic distilling apparatus, Drain trap.

Drawerpulls, W. N. Weeden 183,476, 183,477, 183,478, 183,479
 Dusting brush, L. Hoboth 183,486
 Dyeing apparatus, D. Allen 183,360
 Ear muffler, W. Abbott 183,359
 Earth auger, C. D. Pierce 183,467
 Egg carriers, forming, L. S. Ball 183,444
 Embroidering attachment, I. M. Rose 183,380
 Emery wheels, etc., facing, T. A. Richards 183,468
 Emery wheels, tool for facing, T. A. Richards 183,469
 Envelope, E. D. Dougherty 183,380
 Excavator and dumping cart, J. Price 183,326
 Exercising machine, F. and J. Hainsworth 183,296
 Extension table slide, S. B. Alexander 183,276
 Fare regi ter, W. J. Stillman 183,341
 Fastening for horse blankets, J. Hall 183,391
 Feed water eater, C. Hewins 183,303
 Feed water heater, L. P. Magoon 183,463
 Fence, W. Stacy 183,337
 Fence wire to posts, M. S. Harsha 183,299
 Filtering liquids, T. R. Sinclair 182,42
 Fingernail trimmer, W. C. Edge 183,256
 Flood fence, Marshall & Sallar 183,216
 Flute, L. C. Southard 183,429
 Freight car, E. D. Shaffer 183,334
 Fruit basket, J. H. Marvill 183,407
 Game card, R. T. Sitterley 183,335
 Gearplaner, A. Hanauer 183,298
 Grinder for bridges, J. Foster 183,291
 Glass tool, J. Lamont 183,267
 Glassware, making, Adams & Bonshire 183,274
 Glassware, making hollow, T. B. Atterbury 183,277
 Grain car door, J. M. D. ncan 183,287
 Grain drill, W. H. Nauman 183,321
 Gr in grinder and scourer, L. O. Stevens 183,339
 Grappling projectile, Greenough & Morrison 183,457
 Grate, G. W. Geissenhainer 183,456
 Gratebar, G. H. Clarke, (r) 7,351
 Hangerforblinds or doors, E. Prescott 183,325
 Harrow, flexible, J. A. Anderson 183,245
 Harvestdropper, W. H. Ake s 183,275
 Hat an clothes rack, I. W. Heysinger 183,261
 Hay and cotton, press, J. Lytch 183,318
 Hay loader, T. Elliott 183,283
 Health lift, J. P. Marsh 183,269
 Heel machine, boot, Z. M. Lane 183,310
 Hinge, C. E. L. Holmes 183,459
 Hinge for glass articles, B. Bakewell, Jr. 183,247
 Horseshoes, making, S. Espach 183,451
 Horseshoes, making, J. A. Burden 183,250
 Hose spanner, J. E. Tabor 183,344
 Hydraulic motor, W. O. Wakefield 183,346
 Joints, apparatus for contracted, S. A. Darrach 183,376
 Kitchen commode, W. Elvis 183,385
 Lamp, T. W. Brown 183,249
 Lamp chimney cleaner, D. T. Freese 183,293
 Lathe dog, J. McGeorge 183,408
 Leather-cutting machine, Schofield & Stevens 183,471
 Leg and foot rest, T. Weddle 183,475
 Lightning rod, R. S. Cole 183,370
 Lightning rod, C. H. Smith 183,425
 Lightning rod connection, C. H. Smith 183,476
 Liquid measure, J. F. Judy 183,306
 Lock stop box, T. Birch 183,365
 Lubricating compound, P. Sweeney 183,343
 Masonic badge, J. McCoy 183,318
 Match splint, C. A. French 183,257
 Meat tenderer, J. W. Smith 183,273
 Milk cooler, Eddy & Foster 183,384
 Milling tool, J. M. Smith 183,272
 Millstone exhaust, G. L. H. Behrens 183,218
 Mitering machine, L. D. Howard 183,397
 Moss, process for preparing, G. H. Blake 183,281
 Nail box, R. Hernance 183,394
 Nut lock, D. R. Pratt 183,324
 Nut lock, A. J. Scott 183,472
 Oil chandler, H. Wellington 183,351
 Optical lens, C. Alt 183,443
 Ore concentrator, F. E. Mills 183,319
 Paint brush binder, L. Tannev 183,345
 Paper box, E. D. Shelton 183,423
 Paper collar, F. Wixson 183,355
 Paper pulp engine, J. S. Warren 183,349
 Petroleum register, W. Mehan 183,410
 Petroleum lamp, W. Dette 183,450
 Piano action, M. C. Knabe 183,303
 Pipe coupling, W. T. Nyhan 183,465
 Planing machine guide, Italt & Prindle 183,418
 Plaster ceiling, cornice, etc., T. P. Cleary 183,369
 Plow, G. T. Hedrick 183,393
 Plow fender, W. A. Barrows 183,361
 Plug tobacco, A. Pearl 183,466
 Plumber's plug, W. A. Butler 183,447
 Pocket check book, G. E. Waring, Jr. 183,347
 Printing on metal, etc., L. B. Smith 183,336
 Printing telegraph, A. A. Knudson 183,462
 Pump, Smith & Kingsbury 183,427
 Pump valve, C. Roth 183,420
 Railroad switches, J. S. Williams 183,437, 438, 439, 440
 Rawhide, treating, S. A. Darrach 183,377
 Refining petroleum, etc., D. M. Lamb 183,401
 Refrigeration, process of, R. H. Lucas 183,406

On an application for Design (3 1/2 years)	\$10
On application for Design (7 years)	\$15
On application for Design (14 years)	\$30

THE VALIDITY OF PATENTS.
 We recommend to every person who is about to purchase a patent, or about to commence the manufacture of any article under a license, to have the patent carefully examined by a competent party, and to have a research made in the Patent Office to see what the condition of the art was when the patent was issued. He should also see that the claims are so worded as to cover all the inventor was entitled to when his patent was issued; and it is still more essential that he be informed whether it is an infringement on some other existing patent. Parties desiring to have such searches made can have them done through the Scientific American Patent Agency, by giving the date of the patent and stating the nature of the information desired. For further information, address
MUNN & CO.,
 37 Park Row, New York

Advertisements.
 Inside Page, each insertion --- 75 cents a line.
 Back Page, each insertion --- \$1.00 a line.

APPLETONS' American Cyclopaedia.

NEW REVISED EDITION.
 ENTIRELY REWRITTEN BY THE ABLEST WRITERS ON EVERY SUBJECT.

Printed from New Type, and illustrated with several thousand Engravings and Maps.

The work originally published under the title of the NEW AMERICAN CYCLOPEDIA was completed in 1863, since which time the wide circulation which it has attained in all parts of the United States, and the signal developments which have taken place in every branch of science, literature, and art, have induced the editors and publishers to submit it to an exact and thorough revision, and to issue a new edition, entitled

The American Cyclopaedia.

Within the last ten years the progress of discovery in every department of knowledge has made a new work of reference an imperative want. The movement of political affairs has kept pace with the discoveries of science, and their fruitful application to the industrial and useful arts and the convenience and refinement of social life. Great wars and consequent revolutions have occurred, involving national changes of peculiar moment. The civil war of our own country, which was at its height when the last volume of the old work appeared, has happily been ended, and a new course of commercial and industrial activity has been commenced. Large accessions to our

GEOGRAPHICAL KNOWLEDGE
 have been made by the indefatigable explorers of Africa. The great political revolutions of the last decade, with the natural result of the lapse of time, have brought into public view a multitude of new men, whose names are in every one's mouth, and of whose lives every one is curious to know the particulars. Great battles have been fought and important sieges maintained, of which the details are as yet preserved only in the newspapers or in the transient publications of the day, but which ought now to take their place in

PERMANENT AND AUTHENTIC HISTORY.
 In preparing the present edition for the press, it has accordingly been the aim of the editors to bring down the information to the latest possible dates, and to furnish an accurate account of the most recent discoveries in science, of every fresh production in literature, and of the newest inventions in the practical arts, as well as to give a succinct and original record of the progress of

POLITICAL AND HISTORICAL EVENTS.
 The work was begun after long and careful preliminary labor, and with the most ample resources for carrying it out to a successful termination. None of the original stereotype plates have been used, but every page has been

PRINTED ON NEW TYPE,
 forming, in fact, a new Cyclopaedia, with the same plan and compass as its predecessor, but with a far greater pecuniary expenditure, and with such improvements in its composition as have been suggested by longer experience and enlarged knowledge.

THE ILLUSTRATIONS,
 which are introduced for the first time in the present edition, have been added not for the sake of pictorial effect, but to give greater lucidity and force to the explanations in the text. They embrace all branches of science and of natural history, and depict the most famous and remarkable features of scenery, architecture, and art, as well as the various processes of mechanics and manufactures. Although intended for instruction rather than embellishment, no pains have been spared to insure their

ARTISTIC EXCELLENCE.
 The cost of their execution is enormous, and it is believed they will find a welcome reception as an admirable feature of the Cyclopaedia, and worthy of its high character.

THE AMERICAN CYCLOPEDIA IS NOW COMPLETE
 in sixteen large octavo volumes, each volume containing over 800 pages, fully illustrated with several thousand Wood Engravings, and with numerous colored Lithographic Maps, the whole costing the publishers a sum exceeding

FIVE HUNDRED THOUSAND DOLLARS.
 exclusive of paper, printing, and binding.

PRICE AND STYLE OF BINDING.
 In extra Cloth, per vol. \$5 00
 In Library Leather, per vol. 6 50
 In Half Turkey Morocco, per vol. 7 00
 In Half Russia, extra gilt, per vol. 8 00
 In Full Russia, per vol. 10 00
 In Full Morocco, antique, gilt edges, per vol. 10 00

THE BEST CYCLOPEDIA EVER PUBLISHED,
 one that will supersede all others, is now offered to the public at a very moderate price, less than one cent a page! Just think!

A SAVING OF TEN CENTS PER DAY,
 the price of a cigar, or many other expenditures for luxuries or frivolities of like amount, would pay for a complete set of the Cyclopaedia by a bi-monthly subscription. There will be something substantial saved, and a storehouse of knowledge, indeed

A UNIVERSAL LIBRARY IN ITSELF,
 secured with but little effort or sacrifice.
 Specimen pages of THE AMERICAN CYCLOPEDIA, showing type, illustrations, etc., will be sent gratis on application.
 Persons wishing to subscribe, can receive the whole set at one time, or one or more volumes at any time, the delivery suiting their convenience, without any cost of carriage, by forwarding their address to
