NEW YORK, JANUARY 12, 1850.

Reading during the Winter Evenings.

It is well known that our youth, especially the winter season, than any other. The question, "how shall it be spent most profitably?" we believe, is seldom asked. We are sorry to on in the wrong direction, to the beginning. know that so many spend it in vain idleness. It is too common a practice to kill time by telling and hearing unprofitable stories in favorite places of resort, or idling it away in low pleasures. The ball room receives far more countenance from our youth than the lecture room; and the novel more attention, than a good work on some useful subject. Some say that it is owing to the dryness of the subject in both cases, or the manner in which they are treated, thinks, "was not merited." As this is a subthat the useful is neglected, and the attractive ject connected with the physical welfare of our but vain, preferred. There is truth in this in fellow men, we can justly say a few reasonasome cases, but not always. Some treat reli-ble things about it. We did not use a single gion as if it were a system of mental excoria- word in the article referred to, without weightion, and some authors who write on useful ing it well. We do not think that we were subjects, treat them in such a staid and dull unjust in any of our remarks: we believe that manner, that we are often tempted to believe they wish for the fame of great learning difference of opinion respecting the manner in by writing in a style which they neither understand themselves, nor any other person. Some such authors may well depart exclaiming like the German philosopher, "I am dying, and there is but one man who understands in Scotland, and thinks that some of Burn's my writings, and he very indifferently." But songs have a pernicious effect upon the cusall these things do not even furnish a grain's toms of the country. We have also seen these time to laugh and a time to sing." Whatwe drunkenness, and certainly far less injury to alum about one half an ounce and let the lifind fault with, is the contemptible, foolish their brawny bodies. and unambitious way in which some young men spend some of their spare hours. In our changes from Scotland, that some clergymen cities they are worse than in the country, for are taking measures to do something in arrestthe fact is, our best men (not all however) are ing drunkenness. In Edinburg, the United imported from the rural districts. It is quite P. Presbytery have adopted measures to proa common thing to find great numbers of our | ceed against any member who sells liquor on young men, perfectly ignorant of the first principles of natural philosophy, and barbarously to the good they can do, for there is no class can say this much, "We never saw a man possessed of much knowledge, who was not an attentive and studious reader, and took pleasure of drink on Sabbath, were kept by people in the kettle. Wash and dry. in reading. On the other hand, we never saw connection with the church. Our information | Crimson.—This can be made with cochineal, advise the formation of a stern resolution, to than they have done, for "to him that know-|colors on wool and silk, break the one and acquire the other. Let a eth to do good and doeth it not, to him it is PINKS-Can be dyed like the crimson, only good book be always at hand, and when there sin." is a moment to spare, oh young man, give it; mount a thousand difficulties.

The one who had the ambition wished the oth- us her support to say a good word to arouse dry. er to attend the Winter Evening School with the land of Watt, Burns and Scott, from the him, and the answer he received was, "I am fearful pit into which she is fast falling, and for lamb-skin door mats. Before dyeing they state here, that if an American Inventor wishgoing to a ball: I can get along without the the way to do this is to arouse her clergymen must be perfectly clean and white, except for es to secure a patent in England, he should education you speak of, as others have done." to a sense of what they can do. The retort of the other was, "So could I, but I wish to be what the others you speak of, are not, and which I never can be without a good education." These two young men are still regard to the Iron Manufacture, "Whether, in wool, and yarn can be dyed with the same re- another to claim the honor, he should get an living—the lover of ignorance is a tradesman his experience, the blast entering a charcoal ceipts, only they are not handled like the skins. engraving of his invention published in the with a very indifferent reputation and poor furnace should be limited, either in quantity or The wool is put in bags, the yarn turned on Scientific American. It is looked upon in Briwages, the other is now an author of some ce- pressure—if so, what is the limit ?" lebrity.

Young men, whatever others have been, you can be, but not without effort-continuous, unwavering effort. Without this you may as well expect to be intelligent men, as to expect that the husbandmen could reap his fruitage

the brawnyblacksmith's hammer. Some may ask, "What shall we read?" There is no use for us to tell you what to read, only read good books; and if you want to learn the principles of science, commence at the root of the matter, by studying elementary works. Always commence at the foundation; if you do in our rural districts, have more leisure during not do so, you may expect to be as satisfied commence a book at the end and read straight

## English Piracy of Inventions.

form on the anvil, without repeated blows of appear as fast as we can make room for them. without Cores." This is adding another to the

long list of American inventions pirated in England; and as you have contributed to expose a goodly number of them, I shall be happy to avail myself of your columns to give the facts of the present case, all within my own knowledge or derived from unquestionable evidence. I do this as a simple act of justice to a worthy man, having no interest whatever in the patent.

or this beautiful invention we are indebted to Mr. Thos. J. Lovegrove, of this city. The idea of casting pipes by centrifugal force was first suggested in the summer of 1847. In December the patterns were prepared and the first rude attempt made in February, 1848. Although defective in many particulars, yet enough was shown to prove the principle correct, and that perseverance alone was wanting to insure success.

Further experiments were made, one difficulty after another removed, until in August he applied for a patent, which was granted Dec. 26, 1848.

In September it was exhibited at the Fair neal and a little cream of tartar to the dye of the Maryland Institute, and excited much kettle, along with the yellow oak bark, a beau- attention. The following report of the Com-

Here follows the Report, which is too long for us to publish, but we will give the subour last. A good looking yellow may be made stance of it. It is a certificate of the Board of Managers of the Maryland Institute, given in Baltimore, Nov. 26, 1849. It states that Mr. Lovegrove exhibited his machine at their Annual Fair, Sept. 1848, and that it was for RED.—For one skin take one pound of red "giving form to metalic substances, while in a wood. It is known by different names, such | liquid or molten state, by centrifugal force of a revolving mould." This shows that as early worth of sense to any excuse for not spending things, and lamented over them. It would be this dye wood for half an hour in a tin kettle, as Sept., 1848, Mr. Lovegrove not only had intime to some useful purpose. We do not mean far better for the Scotch, if they must drink, and then let the grounds settle; take the clear vented but constructed his machine—identito say a word against rational amusement— to quit the whiskey and drink beer like the and put it into the broad dye kettle, which cal to the one described by us, and to which we believe with Solomon, that there "is a English. There would not be half as much must not be of iron. Then put in a piece of our correspondent refers. The certificate is signed by Messrs. C. W. Bently, Jas. Murray,

> The President of the Croton Aqueduct Board, New York, gives a certificate, dated April 28th, 1849, stating that he had tried SCARLET.—Boil one ounce for one skin of pipes cast by Mr. Levegrove's machine, with a

> > "The East Boston Iron and Gas Co. are now erecting works for casting on this plan, and in two or three weeks will be in operation. Greenwood & Ceriton, of Cincinnati, will also soon be at work.

When it is known that a pipe 4 inches diam. nutes, and at a cost less than it requires to clean one after the old method, you will admit that it must supersede it.

It is evident from the engraving that Mr. Shanks must have got his ideas from the earlier stages of Mr. Lovegrove's invention, of which it is a pretty exact resemblance. His flask is one piece, so was Mr. L.'s, but he soon found this to be impracticable, and now it is divided longitudinally, with a very ingenious method of joining and separating instanta-FRANCIS H.
