## Aftisiellunemy．

Surgical ©peration．
A very difficult and skilfully performed sur gical operation is noted in the New Orleans Bulletin．The subject was a negro girl about 15 years of age．For some ten years past the girl has had a bony tumor growing on the side of the lower jaw，which had increased to such a size that it almost prevented the utterance of speech．She was placed under the care of Dr． Stone，who，with his assistant，Dr．McIlheny， performed the required operation in the mos successful manner．Having been put under the influence of chloroform，a semi－circular in－ cision was made from the centre of the chin， and extending over the cheek，as far back as the point of the jaw nearest the ear．The whole of the left side of the face was then laid bare by the knife，and exposed to the bone．Dr． Stone then，with the saw，divided the bone through the centre of the chin，and ihrough what is called the＂symphysis，＂a point about an inch from the joint near the ear；and then，with a surgeon＇s chisel，took the piece out．The whole operation lasted atout eight minutes，and the wound was bandaged proper－ ly before the patient awoke from her sleep．－ Without any assistance，she got up from the table，and walked to her room，perfectly ignor－ ant of what had been done until informed of it by the servants．Dr．Mcllheny followed her up stairs，in a few minutes，and found her sit－ ting in a chair，and enjoying with great glee a recital of the operation．The weight of the tu－ mor with the bone was about ten ounces．The girl has since been pronounced entirely cured．

Handsome Editor．
Wenoticed at the Fair of the American In stitute several splendid specimens of the＂ Da － guerre Art，＂executed by Messrs．Roots，of Philadelphia．We also noticed a large swarm of ladies constantly in attemdance，expressing much admiration．Our curiosity had become somewhat excited to know the cause of the immense attraction；which，however，was soon gratified upon discovering the likeness of Thomas Fitzgerald，Esq．，the able editor of the＂City Item．＂We have heard considera－ ble said in regard to＂Fitz＇s＂beauty，but ne ver supposed he was perfectly irresistable un til we saw his daguerreotype．We would com pliment Messrs．Roots，if they needed it．

## Turkish Plan of Curing Founder in

The following is a singular circumstance，as related by the N．A．Farmer：－The late Com modore Porter，when Envoy of the United States at Constantinople，had a horse cured of founder by a Turkish farrier in the following manner：The Turk said the horse must be bled in the inside of the deceased leg．He put a nipper on his nose to keep him steady－then took up the left leg，and crossing it over the right，gave it to an attendant；he then struck his lancet into the vein，a little above the fet－ lock joint，and took from it about three and half pounds of blood．The vein bled freely He now said he had taken enough；he then went to the very opposite side of the leg，and sfriking his lancet into a vein above the knee joint，a single drop drop of blood exuded，and both that and the first opened vein instantly ceased bleeding．There may be no novelty in this，but it certainly astonished me to find that opening two veins in the same limb stop ped both from bleeding；such，however，is the fact，for I witnessed it．He desired that the horse should rest the next day－that he should then be rode with great violence until he was in a profuse perspiration－the diseased limb then to be rubbed with wet salt－（to which I added a pint of hot brandy）－then rubbed dry and then walked about until cool，and covered with blankets；the same process to be repeated next day－which was done，and all lameness from that time disappeared；the horse the third day was perfectly well．

Bishop Chase told his congregation a short time since，in one of his sermons，＇that there was among his females auditors corset boards sufficient to shingle a hog－pen．＂

Within the past month our city has exhibit ed the spectacle of great numbers of itinerant sponge petblars．Pieces which used to be sold in the shops for one shilling，were sold by these pedlers for 3 cents．The first pedlars appeared to be Mediterranean French．All our finest sponges come from the Mediterra－ nean，and the greatest sponge fishers are the Greeks
The sponge of commerco is found attached to rocks in various depths between three fa－ thoms and thirty．When alive it is of a dull biuish black above，and of a dirty white be－ neath．There are several qualities，possibly indicating as many distinct species．
The sponge divers go in little fieets of aiques，each of six or seven tons burden，and manned by six or eight men．The season for the fishery lasts from May until September． All the men dive in turn．They remain in the water from one to three minutes．They de－ sead to the bottom at various depths，be－ tweên five fathoms and twenty，or even though rarely，thirty．Very few of the divers can descend so deep as the above－named depth and it is doubtful whether they can work in such case．In deep water，a rope weighed by a stone is let down，by which the divers as－ cend when they have gathered the sponges They carry nothing about their person excep a netted bag，which is attached to a hoop sus pended round their necks；in this they place the sponges．A sponge is dried in the sun af ter being cleansed in sea－water；fresh water rots it and turns it black．The slimy or ani－ mal matter is stamped out by the diver＇s feet When dried，the sponges are strung in eircles
The sponge fisheries were probably conduct d among the ancient Greeks as they are now Aristotle distinguishes sponges under two heads，those that might be cleaned，and those which could not．Of the last，he states that heir substance was compact，but perforated by large canals．They were more viscous than other sponges，and when dried remained black．The description exactly applies to the common coast line sponges of the Жgean，use－ less for economic purposes．His accpunt of the sponges of commerce is more detailed．
He distinguishes three varieties ：those which He distinguishes three varieties：those which were lax and porous those of thick and close
texture；and a third kind，called sponges Achilles，finer，more compact，and stronger than the othors．These last were rarest，and used to be placed in helmets and in boots，as projections from pressure for the head and feet． They all grow on the rocks，adhering not by one point only，nor by the whole surface，but by the coast which became suddenly deep．－ He attributes the superior fineness of texture in these deep－sea kinds to the greater uniform－ ty of temperature of water in such places．－ When alive，and before they are washed，the are black．Their canals are often inhabited by little crustacea．

Expedition of Sir John Frankilin．
The Cleveland Plaindealer，of Oct．5，h letter dated＇．St．Marie River，＂September 28th，announcing the arrival or Sir John Rich－ ardson，from the fruitless search after the lost Polar expedition of Sir John Franklin，of whose dreadful fate among the ices of the Arctic Oce－ an，there is left little or no room to doubt．Sir John Richardson having failed to find even the remotest clue to the Franklin Expedition is now on his way back to England．He left there in April，1848，and from the Sault Ste． Marie has made a voyage in canoes，and boats， and overland，a distance of three thousand and five hundred miles and back，by way of Lake of The Woods，Makenzie＇s River，\＆c． Alter reaching the Arctic Ocean，they travel－ ed five hundred miles along the coast．He speaks confidently of the existence of a north－ ern passage ；practicability，he says，is anoth－ er question，the summers being only from 38 to 60 days long．He goes by the way of To－ ronto and Montreal to Boston．
An Oil Spring has been discovered in the ountry inhabited by the Chickasaws，at a water－fall near Fort Wachita．It is similar to British oil，exudes from a rock overhanging he falls，and is said to have effected astonish ing cures of rheumatism and kindred diseases

A Polar Bear walar Bear．
A Polar Bear was recently shot，on the coast of Labrador，by the crew of the Liord Exmouth of Halifax．The animal was stuffed and sent o Boston．
Two of the crew of the Lord Exmouth were cruising in a boat，when they discovered the bear upon the Island．They immediately re－ turned to the vessel，took in six others of the crew，and eight muskets，with which they re－ turned to the vicinity of the 1sland．Upon ap－ proaching within gun－shot，the bear perceived and came towards them．The first discharge wounded him in several places，but did not in the least check his approach．Finally howev－ er，after receiving quite a number of balls in his body，he turned and slowly retreated，ma－ king his attackers shudder by the fierceness of his howling．It was then proposed by Dixon that they should land upon the Island，in order to consummate the victory．To this the ma－ jority of the crew demurred from fear．Three of the crew，however，including Dixon，landed， having armed themselves with two loaded guns apiece．The bear，as soon as he saw them upon land turned about and began to approach， when six more balls were put into his body without apparently checking his approach．－ Before，however he got near enough to harm them，Mr．Dixon succeeded in loading another gun．At this moment the bear presented his side which he had not done before，and a bul－ let was lodged in his throat which caused the animal to fall，It was more than half an hour however before they dared to approach，as every few minutes the bear would by a desperate ef fort，get upon his feet with the intention of reaching them．After it was deemed safe， they ventured near，and found him to be dead． He was，with considerable labor，taken to the vessel．and found to be sixteen feet long and to weigh 2200 pounds．Five hundred pounds of at were taken from him in Halilax and it was found that sixteen balls had lodged in his body．The contest lasted for an hour and a half，and the roars of the infuriated animal might have been heard for many miles．
The Vatican at Rome.

The Vatican，which crowns one of the seven hills at Rome，is an assemblage or group of buildings，covering a space of 1200 feet in length，and 1000 feet in breadth．It is built upon the spot which was occupied by the gar－ dens of Nero．It owes its origin to the bishops of Rome，who erected an humble residence on its site，in the early part of the sixth century． Pope Eugenius III，rebuilt it on a magnificent scale，about the year 1150．A few years after－ wards，Innocent II．gave it up as a lodging to Peter II．，King of Arragon．In 1305，Cle ment V．，at the instigation of the King of France，removed the Papal see from Rome to Avignon，when the Vatican remained in a condition of obscurity and neglect for more than seventy years．But soon after the return of the pontifical court to Rome，an event which had been so earnestly prayed for by the poet Petrarch，which finally took place in 1376，the atican was put in a state of repair，again en－
larged，and it was thenceforward considered as the regular palace，and residence of the popes，who，one after the other，added fresh buildings to it，and gradually enriched it with antiquities，statues，pictures，and books，until it became the richest repositery in the world． Its library was commenced fourteen hundred years ago．It contains 40,000 manuseripts， among which are some by Pliny，St．Thomas， St．Charles，Borromeo，and many Hebrew，Sy－ riac，Arabian and Armenian Bibles．The whole of the immense buildings composing the Vatican，are filled with statues，found beneath the ruins of ancient Rome ；with paintings， by the great masters，and with curious med－ als，and antiques of almost every description． When it is known that there has been exhu－ med more than 60,000 statues from the ruined temples and palaces of Rome，the reader can form some idea of the riches of the Vatic an．
＂Can you tell us when the cars leave the depot ？＂＂As soon as the seats are all taken， that will make the car－go．＂

Mr．Taylor，a correspondent of the Tribune aw children digging gold in the streets of San Francisco．

The Scientific American．
The small size of the＂Western World＂pro hibts us from giving our readers all the valua ble information that we could wish．We can however often inform them where they can find the best and most reliable．The＂Scientific American＂always is full ofmost interesting and valuable matter upon scientific subjects．It contains a complete account of all new inven tions，especially those for which a patent had been taken．In fact they have the best means for obtaining information on this subject of any paper in the country．When so many new in ventions are being brought forward，it is often of great importance to the discoverer to know whether he has been forstalled，and thus sav time and expense．We have frequently known instances where individuals have sent model to Washington，only to find that patents hav
It already issued for the same invention．
It contains a full account of scientific meet ins in this and other countries，and chronicles all improvements in manufactures，agriculture \＆c．\＆c．It is published weekly by Messrs， Munn\＆Co．，at 128 Fulton st．New York，at the low price of $\$ 2$ per annum．Our readers well know that we do not often puff any work but when we know of one that really benefits society，we feel it to be our duty to let society know it also．Number 1，Vol 5，was issued September 22．It appears in new type，and with many improvements that materially en hance its value．Back members can be ob tained of the present volume，if ordered soon
［The above notice we copy from the Western World，published monthly at No． 50 Broadway， at 25 cents per year，by that prince of all good fellows Joshua F．Bridge．We are especially grateful to him for the many occasions he has taken to speak favorably of the Sci．Am．with out the least hint or solicitat！on from us．It is always a matter of great encouragement to editors to find their labors，approved by their contemporaries．In this instance we have more than the usual acknowledgement to make as Mr ．Bridge has asked nothing $\mathrm{f}^{\mathrm{r}} \mathrm{om}$ us to render him under obligations to speak in our favor．Although but a young man，his articles compare favorably with Editorial experience and are characterized by a sound and healthy morality which is much in his favor as a young editor．Success to him．

Things as they Exist
Almost daily are we receiving orders from various parts of the Union，for all the back volumes of the Scientific American；or letters of enquiry reading thus：＂Can you furnish me with your valuable work from the com mencement ？＂In reply to such enquiries we are induced to make the following statement， thereby saving many the trouble of making enquiries for volumes that we cannot furnish， and ourselves the time of replying to such on quiries
Volume 1，－Entirely out of print：not a number left．
Volume 2－Complete sets entirely exhausted．
Volume 3－Complete，Bound－A few co－ pies only ：price $\$ 3$ ．

Volume 4－Complete，Bound：\＄2，75－none a sheets．
We have left a few incomplete sets of vo lumes 2 and 3 ，comprising about 50 Nos．， which may be had by remitting one dollar； and we have sets of between 40 and 50 ，Vol． 3 ， which we can furnish at the above price，and also about 40 Nos．of Vol．4，which will be furnished for one dollar

There are but a few sets of the above vo－ lumes left，as complete as stated above，and those who order first will receive the most numbers．
The back Nos．of Volume 5 we are yet able to furnish，butat the rate they are＂going off＂ at present，we shall be unable to send the first Nos．in a few weeks，although at the com－ mencement of the volume 4000 extra copies were printed for the purpose or filling future demands for them．

The amount of British manufactures now exported is said to be enormous．Up to Au－ cust of this year，it was twenty－five million dollars more than the same period in 1848.

The last accounts from California are rife with the still abundant supply of gold．
