## NEW YORK，SEPTEMBER 14， 1850.

## To our Subscribers．－－The End of the

 Volume．This number concludes the Fifth Volume of the Scientific American．From a small be－ ginning，it has grown to have the largest cir－ culation of any other paper devoted to the same objects，in this or any other country．For our extensive circulation we are more indebted to the interest which our subscribers，univer－ sally，have taken in its prosperity，by the zeal they have exhibited to promote its circulation and widen the circle of its influence，than any other paper ever published in our land．To you we can say with gratitude，＂Your breath hath filled our sails．＂We have the same truat and confidence in the good will and kind－ ness of our subscribers that we ever had，and which has never disappointed，but more than realized our expectations．
In casting a glance over our labors for the past year，we cannot wrap ourselves up in the habiliments of self－pride and say，＂we have done all things to perfection．＂Mortals are not faultless；all have their faults－the best have their failings．We have always endea－ vored to conduct the Scientific American im． partially，honestly and independently．With－ out fear，or regard for favor，we endeavor to speak and do what we think is just and right， and leave the consequences to the Great Ruler．
As a paper devoted to science and the me－ chanic arts，it has not its equal in this coun－ try in any respect．We do not say this as a mere matter of boasting，－this is universally admitted on all hands．We present to our read－ ers more new inventions，illustrated，more real every ${ }^{\text {day }}$ practical information，and a greater variety of well packed condensed matter every week，than any other paper．A yard of cloth is not valued as a yard，but according to its quality，neither should any person value a scientific and monnivat paper to ite size， but by what it contains．Our advantages in obtaining useful information，and a knowledge of what is new in the arts，are far superior to those of any other paper in the United States Our correspondence is very extensive，and so is our acquaintance with practical and able inventors and mechanics．This acquaintance－ ship has been of many years standing，and， with many，our friendship is of the most intimate nature．This enables us to obtain more new and useful information relating $t$ inventions and discoveries，than any other pa per in our country．To inventors，our weekly list of patent claims are worth the whole pric of their subscriptions，and no other paper in our country presents anything at all like the information we have presented，and can pre sent，relating to patents and new inventions We have added improvements to every new volume，and we will make Volume 6 superior to all its predecessors．We are determined to labor more assiduotsly and fervently than ever，to maintain the character of the Scienti－ fic American，as being＂The Best Mechani－ cal Paper in the World．＂We hope our subscribers will try and get others to club along with them for Volume 6．We intend to lay out considerable more expense on it than on our former volumes．It will be the best Encyclopedia－as a weekly paper－of mechanical and scientific knowledge，ever pub－ lished．We hope subscribers will send in their subscriptions early．We can assure every man，that he will get the full value of his money，and will never repent having be come a subscriber to the Scientific American

## Engravings．

It has always been allowed that the engra－ vings in the Scientific American，far excel those of any other mechanical paper；we will volume will present the greatest number of volume will present the greatest number of
unrivalled illustrations ever presented in a weekly paper．Our readers may depend upon it，that their subscriptions will be seed sown upon good ground，which will spring up and bear them good fruit．

## The Great State Falr

We took the opportunity，last Friday，of visiting the State Agricultural Fair，held at Albany．We were assured that the day was the most pleasant of all the preceding ones of the week，as a rain storm had laid the dust of that dusty，dusty road，between Albany and Troy．The Fair tents covered an extensiv area，but not more so than those for refresh ments，gambling，and all manner of Riff－Raffs． In one place there were Irish jigs going on， as a faithful specimen of the finest peasantry， full of humor as at Donnybrook．Circuses， raree shows closed up the back ground，with ＂warm meals at all hours，＂by a representa－ tive of the press，who，no doubt，had the wis－ dom to discern that food for the stomach was as necessary as food for the mind and a feast or the eyes．Along with much evil there was much good．
With the live stock it is not our province to deal，although we have some skill there，Hal， and have been held a connoisseur in beef and mutton．We can，however，say a good word for what we saw of that，more than we can say for the drinking and dancing．＂Mechan－ ics＇Hall＂was the best situated tent on the ground，and the most interesting．It is mo－ ally impossible to give an abstract notice of all we saw．We saw many good，new，and useful things，and many，no doubt escaped our notice；and we also saw much that was liter ally worthless．Mr．Emery，of Albany，exhi bited the best and greatest number of agricul tural implements that we ever saw collected in one place．He was awarded quite a num ber of prizes；and so were some of our old friends，whose machines had appeared in the Scientific American．Among these we may mention Lerow \＆Blodgett＇s Sewing Machine on page 1，Vol．5．，Sci．Am．；Mr．Wright＇s machine from Rochester，for sawing ship an ther curved timber，which is illustrated in No． 3 （same volume，）－this good mashine，as it should，commanded a great deal of atten tion ；Bertholf＇s excellent Straw Cutter，on page 52 ，was there；and here let us mention which which we saw，viz．，that of Cleveland \＆Ba－
ker Adams，of Jefferson Co．，N．Y．；this straw atter cuts the whole length of the straw u into pieces at one revolution of the roller．It is very simple，no feeding rollers are used，the eeding blades，of which there are a great number，revolve on a long roller，and cut the traw against stationary knives．Mr．Adams， from Hadley，Mass．，was there with his im－ proved Felloe Machine，and his superior Dog or planing machines，all of which have bee illustrated in our columns．The Apple Paring Machine of Mr．Weed，illustrated on page 84， was also much admired；Mr．Brown＇s Candle Mould，illustrated on page 164，was the sub－ ect of special notice；Dick＇s Anti．friction Press and Punching Machine，illustrated on age 220 ，was exhibited by Mr．Holmes，of New York，and had no equal there；Gro－ son＇s Patent Corn Planter，illustrated on page 327 ，was highly admired；Mr．A．H． Brown＇s hose coupling，on page 332，was in use on the ground ；Mr．Brown is a very inge－ nious and intelligent gentleman．The impro－ ved Plow of Mr．Baker，of Troy，on page 348 had not its superior there，although a plow belonging to Messrs．Starbuck，surpassed all thers，in our eyes，for superior workmanship． Mr．Ide＇s improved Grain Drill，page 372，and the improved Grain Separator of Messrs．Her－ ring，on page 408，were held to be unbeatable in their line．Churns and horse－powers were bundant，－some of the latter were good，and As usual in all Fairs，there were plenty of Washing Machines，the newest and best o which was that of Mr．Joseph Hall，now of Lansingburg，N．Y．，it is named the＂Conca oo and Convexo Roller Washing Machine； it is simple，only consisting of two rollers and n endless apron；the apron saves the buttons， cc．，and allows delicate articles to be safely waished．The rollers are gradiated with coiled springs to accommodate themselves to the washing of all kinds of clothes．
Mr．Winnie，of Albany，had a steam engine in operation，with his＂Patent Cat Off，＂which
appeared on page 268，Vol．4，Sci．Am．；a
section model，showing the whole interior ope－ ration，was at work ；this improvement should be more extensively introduced－it has but to be seen to be admired．Our friends Hoard \＆ Bradford，of Watertown，N．Y．，had one of their unique and compact engines and boilers in full swing ；it attracted no small degree of attention．R．V．DeWitt，C．E．，of Albany， had a model of his Helex Boiler there；it may be termed the＂Turbine Boiler；＂it is undoubt－ edly an economizer of fuel．John Rodgers，of Albany，a first rate engineer and machinist， exhibited the best tobacco cutting machine we ever saw；it is a rotary cutter，with two curv－ d arms，on which the knives are placed；it would make a first rate power straw cutter． Mr．John Gibson，of Albany，had his＂Wood－ worth＇s Planing Machine＂in full operation； the character of this machine being so well known，we need say no more about it than to ate，that the principle embraced in the sam urning out excellent mouldings．
Albany and Troy being celebrated for the manufacture of stoves，the nuynber exhibited struck strangers with astonishment；it is no easy matter to say anything new about stoves －we believe the majority of them are speci－ mens of unsound devising ；we saw one，how ever，in full cooking sway，viz．，that of Mr Shaw，of Albany，which gave us a very favor able opinion of its merits：it applies the heat； thrown down below the grate to the whole purposes of cooking and baking also．Mr．R． Hilson，of Albany，patentee of a Hot Air Fur nace，exhibited a model grate for coal－burning ocomotives，and equally applicable to stoves the centre ofit is a hollow elevated half sphere to prevent the caking of the coals；this grate
excellent one for stoves．
Messrs．Hotchkiss \＆Sage，of Windsor Broome Co．，N．Y．，exhibited their Nodidle Iron or saw mills，and an improved step for plumb－ ing the spindles of stones and wh．eels；it is arranged to move the spindle plumb in a bush according to the load on it；it is a new and good invention．Mr．Rowe，of Albany，exhi bited a most excellent and ingenious machine for splitting and rolling leather；we have never seen a machine to be compared to this n any manner，for the accomplishment of the

## ame objects

There were some excellent carriages on the ground．A splendid Brougham，from th coach factory of Gould \＆＇Co．，of Albany，took our eye ；Eaton \＆Gilbert，of Troy，exhibited ine Omnibus．Mr．Wemple，of Albany，ex hibited a carriage of great beauty．There were two carriage inaprovements from old coharie Co．，which did credit to the inventor One was the Patent Coupling of D．W．Seeley of Carlisle，for vehicles，which has not and never had its equal in our own nor any othe country．Our cotemporary，Mr．S．Hosack Mix，editor of the＂Schoharie Patriot，＂ex－ hibited a Wagon for Plank Roads，with his improved＂oscillatory rolling axle，＂which is the grand dissideratum for changing the axle accommodate itself to the line of draugh in every case where an obstacle is presented or hill to be surmounted，and at the same time answers as a break in descending stee grades．This is a good invention．
In Manufacturers＇Hall the show was good but the place was mud to the knees；it was mpossible to do justice to ourselves or other without a pair of＂Califomia boots．＂Among the many things presented，we were especiall struck with some splendid specimens of color ing on cotton，silk and wool，by P．B．Leddy Albany．Knowing the great amount of practical chemical knowledge required to be ood at this art－an art to which we are all indebted for personal decoration，and respect ing which so many are ignorant－we cannot but say that the specimens exhibited did great credit to Mr．Leddy，and were highly honor－ able to the establishment from which they came，viz．，Mr．Giffen＇s．Mr．Roy，of West Troy，exhibited some shawls made at his fac－ tory，which，in every respect，rivalled those made in Scotland．We also saw some leather which was tanned by Hibbard＇s new paten process in fifteen minutes；some may say， ＂this process is too quick to be good；＂wel

The samples were well tanned；the calf lea ther was equal to the French．The discovery is a chemical one．Being determined to speak of nothing but what we saw with our own eyes，we must say，that for want of Jack the Giant Killer＇s boots，and owing to the great crowd，we had too soon to bid adieu to Manu－ facturers＇Hall，taking a last glance at the un－ rivalled display of Jewelry，by our old friend James Meeks．Ah！here let us add that we noticed some of the linen thread made at Lan－ singburgh，by Mr．Fisher；this being the first linen thread made in America，it did some credit to Mr．Fisher，but very great improve－ ments have yet to be made befere it can rival hat made in the north of Ireland und Scot． land．

In Floral Hall the exhibition of Fruit and Flowers，was refrex．jing to the eye，and in the centre were the 1 Izitical instruments，which were delightful to the ear．A piano with the Dolce Gampans Attachment，which appeared in No．9，Sci．Am．，from the manufactory of Board man \＆Gray，was a splendid instrument， and so was a six octave，by Ballantine \＆ Barhayt；this instrument exhibited great skill ncl execution in workmanship．
Owing to the deplorable state of the ground， and the great crowd pushing and driving，ma－ ny good things，which we would like to have seen，were no doubt overlooked．Two objects of our visit to the Fair were，to see what was new in machinery，and to find out what was intended for the＂World＇s Fair．＂Respecting the latter we were disappointed，and respect－ ting the whole influence of the Fair，there was much that pleased us，and we saw much to condemn．We will briefly give our views on these points next week．

London Industrial Exhibition
At the Meeting for the Advancement of Science in New Haven，Mr．W．R．Johnson poke on the scientific interest of the proposed ndustrial Exhibition at London，in 1851. He said＂it was no doubt known to them all hat the British government have formed a committee for the purpose of carrying out the object of encouraging industry in all countries， at the hoad of which is the Royal Consort， Prince Albert．The British Minister brought the subject，before the government at Wash－ ington，and communications with the Gover－ nors of all the States were had relative to it． Local committees are formed in the different States to promote the contributions of this country to the Industrial Exhibition，and the attention of this association is earnestly called to it．One of the subdivisions is for raw material and produce．The vegetable and animal kingdom is worthy of being exhibited． Machinery is another class ；and it seemed to him of the highest impertance that the atten－ tion of this country should be called to the fact that 80,000 feet of space had been allot－ ted to America for the exhibition．It is impor－ ant that nothing should be sent abroad but what would do credit to the United States， and confer a benefit on the individuals forward－ ing their produce or manufacture．＂
The arrangements for the reception of for ign contributions，we believe，are very liberal very facility is afforded for their convenience and safe keeping．More space in the bazar as been allotted to the United States than to ny other nation excepting France；but though we have 80,000 square feet allotted to us，we shall probably have to ask for more room．The American urput，Mr．Thompson，writes that the Staters York alone would，if allowed all the entire assigned to the country The prizes to successful competitors will mount to at least $\$ 100,000$ ，and will be warded without distinotion of country，by a perfectly impartial a jury as can be obtained．

## To Our Cotemporarios．

We sincerely thank our 400 cotemporaries who have published the Prospectus of Vol．6， ci．Am．We have always received the most courteous and best wishes of nur brethren of he Press；to you we are greatly indebted for ur extensive circulation．As you have helped lengthen our shadow，may yours never grow ss．If we can do anything in this city for a otemporary editor，or publisher，we shall al－ ways feel happy to do it．
