Miscellaneous.

A Whale in Vermont.

42

The workmen on the Burlington and Rutland Railroad, while digging a few days since near Beamen's Hollow, between Vergennes and Middlebury, came across the skeleton of some unknown animal, deeply imbedded in clay. Little attention was paid to the matter at the time, and unfortunately most of the bones were carted off. Enough of them, however, have since been collected by the Rev. Mr. Thompson, of this town, (the learned author of the History of Vermont,) to enable him to determine all the important characteristics of the monster to which they belonged, and to give a drawing representing its proportions. He states that the bones discovered are those of a certaceous animal, (or sea animal of the whale family,) resembling the dolphin. Mr. Thompson further states, that no fish of this particular kind is known to exist, and that the onehere must have lived and died in the salt ocean, long previous to the creation of man.-In size, it was about 11 feet in length, and 6 feet in circumference.-[Burling. Sent.], and-

[The editor of the Green Mountain Freeman, is coming into the faith. He does not object to whales being once inhabitants of Vermont.

Another Lost Chi d Recovered.

The reader will remember, says the Albany | in the shadow of the Temple of the Sun, enga-Evening Journal, that we have spoken of a little girl in possession of the family from whom Mr. Burt of this city recovered his boy. That child is claimed by Henry Baumer, of Hoboken. In June, 1846, the child was in company with her mother, on some public occasion when they became separated. Although the child was missed in a moment, nothing could be heard of her. Her father had searched the Union through, without success, until, seeing forming original designs, and rendering it worour account of the recovery of Mr. Burt's child, thy of its place in the new palace of her mahe went to Oswego, and recognised in this re- jesty. puted "twin-sister" of the boy his own child. When he first saw her, he spoke to her in German, and she replied in German, although she had been three years from home. Mr. B. is now in this city waiting the return of the Governor, to obtain a requisition for the arrest of the women at Oswego.

Prices of Telegraphing in England. The London Times of Sept. 25 contains a statement of the places in England and Scotland at which the Electric Telegraph Company have stations-they are some 50 or 60 in number; also, the rates of telegraphing, which are, for every 20 words, 2 cents per mile for the first 50; 1 cent for the next 50, and for any distance beyond 100 miles, half a cent per mile. These enormous charges are the result in the world-which will even increase the Britain, upon a footing as favorable as British of a close monopoly, which America is happily free from by the competition of various inventors.

[The above is going the rounds, and it is something we cannot understand, as there are as many different telegraph companies in Eng-

New Discovery of Wonderful Ruins in

Nicaragua.

A Peruvian Inca.

At the last meeting of the Ethnological Society of this City, Mr. Bartlett read a letter addressed to the President of the United States from the Inca of Peru, accompanied by a letter from Samuel G. Arnold, of Providence. Mr. Arnold, who has recently returned from South America, met with the venerable Inca, who is 90 years of age. He gives a very graphic account of his appearance, and relates the affecting story of the wrongs of his royal race. He found the princely old priest sitting ged in reading Tasso. `

Queen Victoria's Plano.

The splendid piano of her majesty, Queen Victoria, is completely veneered with ivory, in sheets of from fourteen to seventeen feet in length, and thirty inches and upwards in width, from a single elephant's tooth ! by a spiral process peculiar to M. Pape. It is also encrusted and ornamented with the rarest woods,

Hoe's Printing Presses.

Mr. Kendall, in his last letter to the New Orleans Picayune, gives the following account of the success of Mr. Hoe in establishing the reputation of his power-presses in Paris. Success to American enterprise and genius :

"Colonel Hoe, the celebrated manufacturer of power printing presses in New York, I saw products of their own and other countries into in Paris a few days since, but I learn that he any port of the United States, upon a footing shortly returns to the United States. Great Railroad Tunnel. The Tunnel at New Hamburg, N. Y., is \$30

To carry on this work Messrs. Ward, Wells shops with two fires each, to repair and temper tools, have 12,000 pounds of cast steel in drills and tools in constant use, and have consumed 6000 kegs of powder, of 25 pounds each, in fourteen months. The tunnel is 19 feet high and 24 feet wide, where finished, and will be so all the way through. The work goes on night and day, with perfect system and order, small things, indeed, but the representative of Messrs. Ward, Wells & Co., have been at this job fourteen months.

A Queer Craft.

Those who go from the East to the West, and have occasion to travel on the Western waters, are often amused by the queer looking craft they meet with no queerer than the one described in the following Paragraph from the St. Louis Republican :

Arrival Extraordinary.

The Dolly-Hyandusendawsen arrived here early yesterday morning from the head waters of the Kentucky. She is not a steamboat, nor vet a flat boat, but a sort of a two mule power tug. The mules being set in motion, turn a water wheel attached to the stern of the boat. She is built somewhat in the fashion of the "Two Pollys," a well known craft that plied on the waters of the upper Ohio many years ago when the river was low. This boat is composed of two pirogues placed side by side, over which is built a deck, and above that the cabin. She belongs to some five or six enterprising families, who are emigrating to the West with their children and plunder.

American and British Navigation Laws.

In 1817, Congress passed an act permitting the vessel of any nation to enter cargoes of the extend the same facilities to American vessels. goes from South America, the East Indies, next this law goes into effect, when the vessels of both nations will enter into a placing other worthless lands in a similar competition for the foreign commerce of the course of improvement. world.

tle to land under the proprietors of East New swimming nimbly about-one hundred and world. Around one mill, within a circle of Tricks of a Flying Machine Man. Jersey, which was derived from the grant of

The First Cotton Factory. A correspondent of the Providence Journal says:

"The American Quarterly Register for June contains some very interesting manufacturing statistics. The editor has fallen into an error, however, which we take the liberty to correct. Speaking of the factory erected in Bayfield, Massachusetts, in 1793, he says it was 'the first regular factory establishment in the Uni-States.' There are at least two that took precedence of the Bayfield establishment. viz..one in Beverly, Massachusetts, erected in 1788 and chartered in 1789, and one in Pawtucket, established in 1790. The spinning and weaving in the Beverly factory was done by hand-power. In the Pawtucket factory the machinery was moved by water-power. In 1789 General Washington visited the factory in Beverly, and expressed a warm interest in its success. During that year ten thousand yards of cotton goods, such as corduroys, velveteens, &c., were manufactured there. It was a day of a branch of industry now vitally connected with our national prosperity."

Earthquake in Massachusetts. The Bunker Hill Aurora says :-

"A very severe shock of an earthquake was felt in several of the towns in the middle of this county, on Monday afternoon, between 3 and 4 o'clock. Two very loud and heavy explosions were heard, and the earth and buildings continued to tremble during the moments which elapsed.

At Acton, Concord, and other towns, the people ran out of the houses and stores, supposing some terrible explosions of the powdermill in Sudbury had occurred. At Concord, Acton, Carlisle, Bedford, Lexington, Lincoln, Stow, and probably many other towns, the shocks were distinctly realized, and it was generally supposed to have been the blowing up of some powder-mill. By some persons the shaking was said to resemble that produced by the rolling of something heavy in a room overhead. A similar shaking of the earth was felt in the same locality about a year ago, early in the morning.

Planting Chestnuts.

At a late farmers' meeting in New York, Mr. Rice, speaking of planting Chestnut timber remarked, that he plowed up a track of unproductive hill-side, several years ago, and planted it with chestnuts, in rows four feet apart every way. The first sprouts coming up rather crooked and scrubby, he went over the field, and cut them down close to the ground, which caused new sprouts to shoot up straight and vigorous. The trees are verythrifty. completely shading the ground, and grow more and more rapidly as the soil becomes strengthened by the annual deposit of leaves. So well satisfied is he with the experiment, that he is now
