## Hfistellurrows．

## Foreign Correspondence．

London，12th Feb．， 1851.
Since my last letter was sent away，the lis of admission fees for the Great Exhibition has been published by the Commissioners．Sea－ son tickets will be $£ 3$ 3s．for a gentleman，and $£ 2$ 2s．for a lady，that is，three guineas in the one，two in the other case，and allowing $\$ 4,84$ for each pound，a gentleman＇s ticket amounts to the snug price of $\$ 15,21$ ．These tickets are not to be transferable．On the first day of the Exhibition none but those who have season tickets will be admitted．On the se cond and third days after the Exhibition is opened，the price will be $£ 1$ for one day．On the fourth day it will be five shillings sterling and on the 22nd day it will be reduced to 1 s excepting on Friday，when it will be 2s．6d．， and on Saturdays，5s．No person is to go to the door expecting to get change，for none will be given．This is to prevent confusion and interruption at the entrance．Those friends who come here from our Republic must not forget this．They must go，excepting ox big－bugs，on the first four days of the week， and have the exact change for tickets in their pockets．No person will be admitted to any part of the building during the Fair，unless he has a pass signed by Mr．Digby Wyatt，the Secretary．The application of every foreign exhibitor for a pass will be referred to the Commissioner of his country for his report，be－ fore it．will be granted．Day tickets must be worn on a conspicuous part of the dress，and delivered up when leaving the building．
Before any person can enter the building，he will be required to sign the following declara－
tion：＂I hereby declare that I will conform tion：＂I hereby declare that I will conform
to all such rules as the executive committee mav find it necessary to make，for the conve nience of the public and the exhibitors in the management of the exhibition；that $I$ will not part with my ticket of admission，or be \＆par ty to the admission of any person not privileg． ed to enter；and that I will give my best assis tance at all times in protecting the genera property and interests of the exhibition．＇
Strangers calling upon persons having the privilege of entrance，must wait in an ante room，but not be permitted to enter the build－ ing．By referring to the name of the person wanted，and ascertaining if his number is de－ posited，the gate－keeper will be able to inform the visitor whether such privileged person is in the building or not，and if not，such visitor must be required to leave．
There is a strictness and closeness about all the arrangements，which would never be re quired at home in America．The value of the property exhibited，the sharpness and unscru－ pulous character of the Cockney thieves，ac－ count for all this，every person is forbidden to touch goods not his own，and all our locofo． co exhibitors are forbidden to introduce match－ es or light of any kind．There is one grand rule adopted，viz．，＂no fees or payments of any kind to any officers or servants of the ex－ hibition will be permitted，and any person re－ ceiving any will be dismissed．

A number of very ingenious articles and machines for the exhibition have already been brought into public notice，and it will excite no little pride in the bosoms of Americans，if their countrymen compete successfully with the well tried skill of the old European coun－ tries．

A most wonderful file，finished by a Sheffield file forger，named Hiram Younge，has been highly extolled．The length is 54 inches， breadth 34 inches，thickness 3 of an inch， weight 28 lbs．With some small exceptions the whole surface is covered with ornarrental designs，all cut by hand with hammer and chisel，in a style which for artistic beauty is truly astonishing．The tanga（it is a double tanged file）are sunk by filing，and are orna－ mented on one side with the national arms and the words＂God save the Queen，＂on a shield；a front view of the cutlers＇hall on the other，while the motto＂Pour parvenir a Bonne foy．＂The other tang represents Atla Bonne foy．＂The other tang represents Atlas
bearing the globe，with two lions couchant；
beneath are the Sheffield arms，and a cornuco pia on each side．On the reverse side appear the cutlers＇arms with the emblem of industry －beehives and bees on the wing－on each side．On the moulding these words appear－ ＂Cut，designed，and executed by Hiram Younge，a member of the Sheffield file trade．＂ The centre or body of the file is ornamented on one side with an accurate，full length view of the great palace of industry，in perspective orming an elegant and spirited sketch．The everse side is occupied by a beautiful view of hat imposing structure，the Sheffield Infirma ry；while on the ends，between the centre and
the tangs，are four views，illustrating the pro－ cess of the file manufacturing
It revolves on pivots，so that every part can be inspected in succession with ease，and the position varied to bring out the innumerable effects which change of position discloses，and exhibiting a pleasing variety of light and shade．The lighter parts possess that pecu－ iar bright richness observable on highly or namented silver plate．But the most ra－ markable feature in this elaborate ornamenta tion is a number of trees in full foliage，luxu－ riant as the work of the pencil．Each sepa－ rate shade is effected by a distinct style of per ect tooth．
Along with this triumph of Englinh art， nd which the French and Swiss must try hard to surpass，there will be exhibited a tiny steam engine，with all its connected parts， weighing only about one ounce，yet perfect in every respect，and running at a high velocity －making all of 600 strokes per minute．
These brief touches of inventions will give readers of the Scientific American an idea o some things they may expect to see at the Great Fair，and those who will not attend the Exhibition may expect to hear regularly，i possible，from me about its wonders．

Excelsior．
Gigantic Bird．
At a late sitting of the Academy of Sciences M．Charles Bonaparte，Prince of Canino，pre sented $a$ sketch of a large bird discovered by Mr．Parkins on the banks of the White Nile． It stands on legs four feet high，with a body like a stork，and a head like a whale．It has received the name of baldniceps，and the speci－ fic name of rex．At another sitting M．Geof froy St ．Hilaire presented the bones and eggs of a huge bird，a native of Madagascar．Two of the eggs are entire，but the other is broken． It is calculated from the measurement made thateach of them can contain eight litres of liquid，or as much as six ostrich eggs，or 135 hens eggs．M．Geoffroy St．Hilaire supposes this gigantic bird to be a perfectly distinct genus．He has given to the genus the name of oppornis，and to the species that of maxi－ mus．The remains exhibited were last year obtained at Madagascar by a merchant cap－ tain named Abadie，and by him sent to the Isle of Reunion，and thence to France．

Large Production of Printing Cloths．
This production of printing cloths at Provi dence，R．I．，is not now far from 75，000 pieces weekly，and when the business is good，con－ sicierably more．About 16,000 pieces are con． sumed by the parties who manufacture them the others are sold．

## A Reduction of Fare．

An effort is now being made to prevail on the Baltimore and Ohio Railroad Company to reduce the fare between Baltimore and Frede rick to $\$ 1,80$ ．A corresponding reduction of fare，it is thought，will also be made by the proprietors of the line of stages between Ha gerstown and Frederick．The object is to pre vent the Pennsylvania Railroad from monopo－ vent the Pennsyl．
lizing the travel．

The Gopher，a species of ground squirrel with pouches on the outside of its cheeks to carr the dirt from its hole，is very plenty in Mis－ souri and Iowa；but has never yet crossed the river into Illinois or Wisconsin．It only work at night，burrowing in holes under ground，sub sisting on the roots of trees，grasses，and vegetables．There are persons who have suf－ fered by their depredations for twenty years， ho have never been able to catch，or

Manufacture of Jewelry in Newark．
We learn from the Newark Daily Advert ser，that there are in that city 18 manufactu rers of jewelry，employing 600 hands，at an verage of $\$ 12$ per week．The weekly pro duct of manufactured articles is about $\$ 35,000$ or $\$ 1,820,000$ a year．In the manufacture o watch cases alone，about fifty hands are em ployed．In some manufactories chains are made；in others principally rings，while in others almost every article yet invented for the adornment of the person of both sexes，are manufactured，The gold used for a year past has oeen mostly the product of California， brought to Newark assayed and in bars；the precious stones forming a part of the orna ments are imported from Europe ready cut for use．The jewelry manufactured is sold prin－ cipally to houses in New York，Philadelphia， and Boston，who supply orders for it from va－ rious parts of the United States，West Indies and elsewhere，while a few of the manufactu rers have established warerooms in New York where they receive orders from abroad direct to themselves．Five steam engines are alrea－ dy used in Newark，in the polishing and othe processes of this branch of inanufacturing．

## Navigation and Shipbuilding of

 States．The Annual Report on the Commerce and Navigation of the United States，by Senato Corwin，presents some very interesting infor mation relative to the rapid increase of our in ternal commerce especially．In 1815 the ton nage of foreign shipping was 854,254 tons ；of inland navigation tonnage， 513,813 tons．In 1850 the foreign tonnage had arisen to 1,585 ， 711 tons，and the inland tonnage to $1,949,743$ In 1815 the foreign tonnage exceeded the in and 60 per cent．Now，the inland exceed the foreign 25 per cent．！The＂registered tonnage＂has increased 700，000 tons；but the ＂enrolled and licensed＂tonnaged has increas－ ed $1,400,000$ tons．The whole increase from 1820 to 1850 （a period of thirty years），is 175 per cent．Now the growth of population in that period is 130 per cent．，proving the growth of commerce and navigation to be faster than that of the people！Among the mostobvious causes of this fact is the introduction of steam na vigation on the western rivers．The steam tonnage on all the western rivers exceeds 300,000 tons；but this had no existence in 1815，the period of comparison in the above table．
Were the Heurews Acquainted with Butter
We have received a letter from Mr．N．R． Merchant，of Guilford，N．Y．，directing our at tention to the recent article on Butter，No．23， wherein it is said that butter was unknown to the ancient Hebrews．He mentions several passages，such as Gen．xviii．8，\＆c．，where butter is mentioned．We know that butter is mentioned quite a number of times in the sa－ cred writings，but those acquainted with bibli－ cal criticism agree that the word chamea，trans lated butter，signifies cream or thick milk，and not the substance we know by the name of butter．In Job xx．17，it says，＂he shall see brooks of butter．＂This was not our butter In Proverbs，churning of milk is mentioned but the original words signify squeezing，no agitation，like our churning．
（For the Solentific American．）
I noticed in Yankee Clocks．
I noticed in your paper，a few weeks since an article on Yankee Clocks，which was quite
interesting to me；and I would state，for the gratification of the curious，that I have one made by E．Terry \＆Sons，Plymouth，Conn．， which has stood on the same shelf for more than twenty－five years，and has never stopped running（except by accident or neglect）but about 8 or 10 times，occasioned by intense cold －and it has not cost the first cent for repairs and is，withall，a first rate time keeper．J．C

India Rubber Patent Controversy There has been quits an amusing controver sy going on in the Tribune between Horace $H$ ． Day，and Wm．Judson，respecting the Good year India Rubber Patents．Between the two the public is not much enlightened．Our Jaws －most miserably carried out，or defective in respect to trials－are to blame for delays in settling patent cases．

Praising Tea．
Oh！what varieties of pain do we not make our women suffer！And，in those varieties， what a part of confidante has that poor tea－pot played ever since the kindly plant was intro duced among us！What myriads of women have cried over it，to be sure！What sick beds it has smoked by！What fevered lips have received refreshment out of it！Nature meant very gently by women when she made that tea－plant！And，with a little thought what a series of pictures and groups the fancy may conjure up and assemble round the tea－ pot and cup．Millissa and Sacharisa are talk ing love secrets over it．Poor Polly has it nd her lover＇s letters on the table；his letters who was her lover yesterday，and when it was with pleasure，not despair，she wept over them Mary comes tripping noislessly into her moth－ er＇s bed－room，bearing a cup of the console o the widow，who will take no other food． Ruth is busy concocting it for her husband， who is coming bome from the harvest field One could fill a page with hints for such pic－ tures．

## Influence of Ozone

In the village of Roggendorf，in Mecklen－ burg，towards the end of 1846 ，slight catarrhal affections were prevalent；the air at that time contained only slight traces of ozone．At the commencement of the year 1847，these affec－ tions assumed the most serious forms of bron－ chial and cattarrhal diseases，and whooping． cough affected a large proportion of the popu－ lation．At this period there was perceived a considerable increase in the proportion of ozone contained in the atmosphere，and influenza was immediately developed．On the 9th of January，the ozonometer showed a still great－ er increase in the proportion of ozone in the air；the same day ten persons died of the in－ fluenza，and the disease gradually progressed to such an extent，that on the 21st few per－ sons had escaped it．During all this time there was a perfect connection between the presence of ozone and propagation of the di－ sease．Since sulphurous vapors prevent entire． ly the formation of ozone，it follows that the workmen employed in manufactories in whict sulphur is concerned should escape its influen－ za．M．Splenger has fully proved that this is really the case．－［Hzule Zeitschrift．

Responsibility for Baggage．
A bill has been introduced into the New York Senate，providing that when the baggage of persons travelling on steamboats has been checked，and is not delivered on being called for by the party holding the check，he may be a competent witness in any suit brought by him for the loss of his baggage，to prove its contents as value．Put it through．

Rose bugs have been so common in some of the Eastern States，that on the sea－shore they have floated in winrows on the sand，having been driven into the sea by winds，and drown－ ed．They have only made their appearance in this region，in any considerable quantities， within three or four years．

Valuable Property．
The propert；on the northeast corner of Broadway and Grand street，known as the Broadway House，has lately been sold for $\$ 90,000$ ．The lot is 100 feet square，and the new owners design erecting on it a new build ing covering the entire lot．

One Eyed Thompson．
A notorious individual，bearing the above name，put an end to his life last Monday in our city prison．He poisoned himself by mor－ phine，and left behind him a letter ．which bears unequivocal evidence of a moral obliqui－ ty of mind stamped with the deepestinfidelity to honesty．He was a forger，spy，and quack but was intelligent，ingenious，and this made him very dangerous to the community by his knowledge in fabricating bills，and changing their value by chemicala．

Communications．
We have a number of communications on hand awaiting attention and examination． Our correspondents must have pa
have to exercise a great deal of it．
