NEW YORK, APRIL 26, 1851.

Knowledge is Democratic.

ledge is one of them. Wealth can purchase houses, lands, adherents, and bauble honors, and a man may sit down and enjoy these things at once. An heir to an empire may be born, he may be the legal successor to thrones, armies, and navies; over all these he may exeramong beggars, while the son of a beggar may be more than a prince among kings and more teachers, and money may be lavished to procure knowledge, but the individual cannot obtain it from teachers or books, without personal effort. Knowledge can only be obtained by labor, and without this no man can obtain it; and however poor a man may be, if he labors to acquire knowledge, he cannot fail of success according-yes according-to the amount of labor he expends in the search of it. The nobles and magnates of European nations are well aware of the "power of know. ledge." This is the reason why they have endowed splendid colleges to which they send their sons to labor as any plebian's sons must labor, in acquiring knowledge. Knowledge therefore, is democratic; it is true that more time and means may be at the command of the rich than the poor, and in this respect, the former have the decided advantage; but they are brought to the same level in one respect, they must work. One acquires knowledge faster than another, all have not the same faculties, but talent is in the mass. The majority of great men have sprung from the people. Shakspeare, Newton, Frankthe people, the workers-plebians born, but kings of mind, while crowned monarchs beside them are but kings of mud.

There is another wrong notion abroad respecting "a learned man." Some suppose that a man cannot be learned unless he is a great astronomer, or can speak twenty or thirty languages, and soon; and others that a man must be profoundly acquainted with all the sciences. There are very few who acquire a profound knowledge of more than one science, as a single science requires a lifetime of study. Such men as Humboldt and Henry are exceptions; but although a few men become eminent in a number of sciences, the fact is beyond dispute, that a man must pursue continually one branch of science to become profoundly versed and eminent in it.

We talk of this and that influence, levelling the mass of men upwards, but the great elevator and democratic reformer is knowledge. The well behaved intelligent man is respected although he may be poor, and we wish this fact to be spread far and wide, and to be felt ing an enjoyment (tautological though the

to preserve that deep respect for almanacs (as sceptical age to have departed from all the world beside. Thus when a contract with a gas company to supply our streets with gas light, (gas was not made to light our streets The few remarks which we are now about to | with light, but to supply the city with gas, make, are applicable to men of every age and mind that), the moon in her usual course has in every condition of life. "Knowledge is always been brought in to fulfil part of the power: wealth is only desirable because of contract. Now this would have been very those things which it can purchase to grati- wise, had the moon been a primary luminary, fy the desires, but there are somethings which but no matter. Well it so happened on the cannot be purchased with wealth, and know- nights of Wednesday and Thursday of last week, that the moon failed according to the almanac, to fulfil her share in the contract, and consequently our city was without light. The streets during the storm were so dark, that even "a lantern dimly burning," would have been an object of delight to cheer the lonely cise dominion and be their possessor, but no traveller on his darksome way. The fault was man was ever born an heir to knowledge. in the moon not fulfilling the part allotted to An idiot may be born a prince or lord, a fool her in the contract. As for the almanacs wherein that part of the moon's contract is specified, why we don't know what our philosophic than a titled lord among magnates. Books, aldermen may make out of it, unless it be to pass some penal statute, to force the nightly luminary into future obedience. As a peosome things, but not in municipal management-that's a fact, more especially in the manner of illuminating our streets.

Atlantic Mail Station on the West of Ireland.

"We learn from Ireland," says the Tribune, "that the advantages which the harespecially Galway, offer to American commerce, are about to be set forth in a memorial to the President and Congress of the United States, which will bear signatures of great respectability from Dublin and other parts of the Island. It is contended that the voyage would average at least forty hours less than to Liverpool, and might be accomplished with greater safety and with less delay from unfavorable winds. The memorial will ask to have the U. S. Mail Steamers stop at Galway instead of going to Liverpool. We have no doubt its petition will be respectfully considered, and that such action will be taken on it as on malin, Watts, Burns, Fulton, &c., were men of ture consideration shall be found most advantageous to the interests concerned. If it is a fact that the transit between Europe and by way of Galway, that must eventually be

It is all a piece of nonsense to suppose that either the American or British Governments will pay the least attention to the unreasonable notions of Irish corporations or any other corporations. The payability of mail routes is the first question, not the practicability. The route between Halifax and England is shorter than between Liverpool and New York, yet it was one of the wisest moves ever made by the British Government, in allowing the Cunarders to come direct to New York. If Galway was a shipping port of any consequence, -if it would pay to carry freight and passengers there direct, then their requests would be reasonable, if backed up with the home authority. What if the American mails were carried to Galway, without any provision by the British Government to make that a mail station? Why the mails might be there for a by every man. > Similar suits, with like results, were tried against Jas. Nesmith and Jose Maria d'Mello.

> [The patentees, it will be observed, in these cases, were successful. We like to see infringers real, self-known infringers, put through. This does not always happen.

Notice to Correspondents.

Those who have any business to communicate with the Editor, he desires them to do so by letter in as few words as possible. Write, In painting rooms we have noticed some and re-write, so as to condense and clarify :one that looks to the north should be painted. Thoughts are more easy to condense on paper a warm color, one looking to the south may than by tongue, so every man should also write lately, which have been laid aside. We want short but comprehensive and clear articles.

Young Children in Factories.

The Providence (R. I) Post states that there are young children working in some of the Rhode Island mills, of such tender ages that they appear to be more fit for cradles than working in a factory. During the past winter they have been employed from half-past five in the morning till 8 o'clock in the evening. We do not know anything about the positive correctness of the above : it appears too terrible to

lantic.
