Miscellaneons.

Fair of the American Institute

 $\mathbf{42}$

This is now the fourth and last week of a few thin leaves of a pamphlet. the Fair; those who have attended it from the first, as exhibitors, must have been at an Avery & Brady, of 39 Green street, N. Y., exenormous expense. We have thought that if hibited what they termed a "multiplying magthey expended but one half of the amount in | netic engine ;" it is composed of four revolvjudicious advertising, it would tell more advan- ing poles, set in motion by four electro-magtageously. Engravings and descriptions of nets, which are fixed at right angles to one machinery in our columns meet the eye of all another and stationary on a frame, the arms those in our country interested in such things. of the revolving bars run inside of them. It would be well, also, to have stated prices, and let them be generally known. Many persons make up their minds at once either to the finest cases of jewelry, in the shape of have, or not have, machinery, when they know its price.

BARBELL MACHINERY.-Mr. Wm. Trapp, Jr., of Ithaca, N. Y., exhibited his patent machinery for making barrels. This machinery saws out the staves, trims their ends, joints them, cuts the chimes, makes the heads, and after the staves are put together into a barrel, is excellent machinery for the rapid manufacture of barrels, and it has been greatly admir- force and lifting pump, manufactured by Myed.

NEW LOCOMOTIVE.-Mr. H. W. Bennett, of which has its wheels so arranged with one another and combined with the truck, that it recovers its equilibrium after passing over an obstruction about half as quick again as common locomotives. It combines the tender with the engine, and carries its water under the boiler : it therefore carries only its fuel behind the furnace, and thus shortens the length of the machine, beside bringing the water weight very low down. It has oscilating cylinders, which are made with changeable bearings to prevent any uneven wear in the boxes. It is an ingenious invention.

BOOK BACKING AND FINISHING MACHINE-RY.-Mr. Charles Starr, of the American Bible Society, exhibits two fine machines-new inventions-the one for backing books and the other for finishing. These machines perform beautifully, and execute good work. Two of them will be exhibited at the World's Fair, next year, in London.

EASTMAN'S STONE CUTTING MACHINE. Mr. Eastman's Stone Cutting Machine, patented last June, was in full operation; its principle is to have a great number of serrated faced rollers set on a revolving drum, the serrated rollers acting upon the stone as they revolve. We must say that we like Wilson's better, (illustrated in our last Volume) ; some may differ from us in this opinion.

DICE'S IRON PLATE CUTTING SHEARS. This invention of Mr. Dick-anti-friction shears for boiler plate-exhibited by J. E. Holmes, No. 794 Washington street, New York, is certainly the best machine for that purpose in the world. It cuts the thickest boiler plates with as much ease and grace as a tailor cutting cabbage. This machine was illustrated in our last Volume.

NEW SUGAR BOILER .- Mr. Knight Reid, of of poesy to our young ladies, who would think the importance of the questions and amount New Haven, Conn., exhibits a boiler for boilsuch an act beneath them.has been well penetrated, and it is thought that involved, urged that under no circumstances ing down sugar juice, by fire heat, which ap-"When Adam delved and Eve span, the proprietors have made a profitable investought the cause to be postponed, unless an pears to be a very good improvement. cunning-handed artificers, and the solid thinking heads of good inventors. The accuracy of press such a hope, nothing but a lot of dreamthe scales made by this old established house, ers. We wonder if they expect our engineers may be judged of by a scale for weighing 12,000 lbs., which we saw plainly affected by

MULTIPLYING MAGNETIC ENGINE.-Messrs.

GOLD PENS -Mr. Bagley, the gold pen ma nufacturer, Broadway, N. Y., exhibits one of gold pens, that we ever looked upon. It was perfectly dazzling, and was an object of general admiration. The show of silver ware in the Fair, this year, never was equalled.

QUARTERMAN & SONS' PAINTS AND DRIERS. -A fine exhibition of chemicals for painters, is displayed by this old and respectable company, No. 114 John street, N.Y. We have it is turned on a peculiar lathe, finished and tried some of their colors, and have found smoothed in the most perfect manner. This them every thing they were represented to be. GUTTA PERCHA ROPE PUMP.-A very good

> CORN STALK CUTTER AND GRINDER.-Mr. Jesse Urmy, of Wilmington, Delaware, exhibits a good machine for cutting corn stalks, hay or, straw. The cutters are revolving enclosed in a drum, to which a band is attached around the periphery and thus motion is given to the different, and uses two different powers. knives. It has also serrated faces inside, which grind the material to be cut, if required, for corn stalks, this is a good combination.

Mr. Bertholf, of Sugar Loaf, Orange Co., N. Y., also exhibits his Angular Cutting Straw Cutter; the main feature of this machine is its cutting action viz., not across the stalk but in a slanting direction. This makes its action easy.

CRACKER AND BISCUIT CUTTING MACHINE. -Mr. Nevins, of 198 Allen street, this city, exhibits one of his small machines, with the improvement which was recently patented and which is decidedly a valuable one.

Mr Bruce exhibits a Rotary Cracker Mrchine, This machine is well known we believe in the trade. Its action is uniform in cutting and feeding.

CARVING BY MACHINERY-Some beautiful specimens of carving done by machinery, by Frederick White, 219 Second street, arrested our attention ; they are copies from plaster medallions and are well executed. The invention must be good to do this kind of work.

THAT OLD ARM CHAIR.-An antic armchair graces the Fair, embroidered with the handiwork of Mrs. Fillmore, our worthy President's better.half. Some of our papers are boasting not a little about this, so do we-it shows Mrs. Fillmore to be a very woman-we like the idea, and must commend that couplet

We, however, consider these artists who exto wear the toga, and our hod carriers to adopt the nude style of the athlaeti. A general European costume; fudge! If the painters and sculptors of Europe cannot immortalize a man in our modern costume, then just let them do the other thing. Those men are merely copyists, who cannot strike out a new path for themselves.

Patent Cases --- Telegraph Case.

Woodbury presiding, the case; Morse Vs. the Boston Medical Journal, in a recent letter House, for infringement of Morse's patent for written from Switzerland, speaking of the a telegraph, was decided on the 17th inst. The | agricultural products of that and the adjoining judge delivered his decision against the peti- country, says: "Immense crops are raised tion of Morse to refrain House from using his here of articles wholly unknown to American telegraph, as being an infringement of Morse's farmers, and perhaps the kinds best fitted to patent. The judge decided that the modes of particular localities, where grain and potatoes telegraphing were entirely distinct, and that yield poorly under the best efforts. One of there was no infringement, therefore he refused these is poppies. Thousands of acres are at to grant an injunction The principal points this moment ready for harvest-which the of his decision, we believe, were, 1st, that traveller takes for granted, as he hurries by, Morse's invention was only an improvement | are to be manufactured into opium. They are in telegraphing by electro magnetism, and the ; not, however, intended for medicinal use at all, improvement consisting chiefly in tracing at but for a widely different purpose. From the the distant end of the wire, marks, made at poppy seed a beautiful transparent oil is made, the near end; and by tracing these marks on which is extensively employed in house paintrolling paper, consecutively so as to be able ing. It is almost as colorless as water, and through a meaning affixed to each mark, by a possesses so many advantages over flax-seed stenographic alphabet of his invention, to re-

2d.-That Morse's patent, so limited, was original, useful, and valid.

3d.—That House's machine does not infringe on Morse's thus constructed, but, except in the use for some purposes of electro magnetism, which was not invented by either; it operates on principles, and with machinery, materially

B. R. Curtis, F. O. J. Smith for plaintiff: R. Choate, Geo. Gifford and C. N. Woodbury for defendants.

The counsel of Morse gave notice of an ap- for salads. peal to a full court.

We will publish the charge in this case next week. It is corrected for the Scientific American, and differs somewhat from the common reports. We would have published it this week had not our columns been so full before we had the pleasure of receiving it.

McCormick's Grain Reaper. In the U. S. Circuit Court, at Albany, N.Y., Judge Nelson presiding, October 18th-Cyrus H. McCormick vs. William H. Seymour and Dayton S. Morgan.-The plaintiff is the inventor and patentee of the Reaping Machine! known as "McCormick's Reaper." The defendants reside at Brockport, this State, where they have been engaged in manufacturing reaping machines, alleged by the plaintiff to be infringements upon his letters patent. For this he claimed fifteen thousand dollars damages. it appeared, by an account which the defen- | the neighborhood of Shediac, and is now exdants had been ordered to furnish, that they had, during the present year, made and sold about two hundred reaping machines, for more | great energy, and there is much competition than thirty-two thousand dollars. When the case was called their counsel moved to postpone it, on the ground that they were not be shipped next season from one mine. At ready for trial. This motion was opposed by present the completion of a railway, three miles the plaintiff's counsel, who, after adverting to

Bark Mill. Another case decided was that of Erastus Wilbur vs. Matthew Beecher for the infringement of a patent for a Bark Mill, which was decided on the 17th inst., one day before the McCormick Reaper. The verdict was in favor of the plaintiff, \$7,500 damages being awarded. Let every just patent be sustained; many have grown so skeptical about patents as to deem them of little value; the above verdict brushes away such notions.

Oil of Poppy Seeds.

In the U. S. Circuit Court, Boston, Judge Dr. Smith, in his editorial correspondence to oil, that it may ultimately supersede that article. Where flax cannot be grown poppies often can be, even in poor sandy soil. Linseed is annually becoming dearer, and the demand for paint oil is increasing. With white lead, poppy oil leaves a beautiful surface, which does not afterwards change by the action of light into a dirty yellow. In short, this oil is destined to bring about a revolution in domestic economy. Another season some one should make a beginning at home in this important branch of industry. The oil may be used for other purposes, and even put up in the cruet

Mining in New Brunswick.

By information received from the New Brunswick papers, and from private letters, we learn that the mineral resources of the above Province are at last beginning to be developed. During the past six months more than twenty mining leases have been granted by the Government, in the Counties of Albert and Westmoreland. Upwards of two thousand chaldron of Bitumen, or Mineral Pitch, have soon be ready for shipment to the United States, to be employed in the manufacture of gas. Beds of excellent coal from two to six feet in thickness, have been pierced at Meranquin, and a party of English miners are engaged to commence the working. A Mr. Steadman has also opened a vein of coal in ploring an asphaltum mine near the Peticodiac River. Surveys we understand are made with among the purchasers of mining leases. It is stated that 100,000 tons of asphaltum might in length, is required to aid its transport to the river. The Black Lead Mine of St. John.
