

KOPPEL
In the heart of the Pittsburgh District

The choicest, most advantageous industrial sites in the Pittsburgh District are at KOPPEL, thirty-five miles from the center of Pittsburgh.

Koppel has
 Unexcelled shipping facilities—cheap freight rates—natural gas and cheap coal—an electric power plant.

It wants:
 Industries, large and small—Stores and business houses to meet the demands of a rapidly growing town.

It offers:
 Exceptional opportunities to the manufacturer who wants a choice location in the greatest industrial center in the world—
 To the retail business man who wants to get in on the ground floor and grow up with the town—
 To the builder who wants to take advantage of the insistent demand for houses.

KOPPEL is a town full of opportunities.
 Write to-day for the booklet.

 "Men's Apparel," for men's apparel, L. Adler Bros. & Co..... 2,093
 "None Purer None Better," for malt liquors, Meek Co..... 2,088
 "Skeeter Scarer," for a preparation for driving away mosquitos, L. A. Hansen..... 2,090

A printed copy of the specification and drawing of any patent in the foregoing list, or any patent in print issued since 1863, will be furnished from this office for 10 cents, provided the name and number of the patent desired and the date be given. Address Munn & Co., 361 Broadway, New York.

Canadian patents may now be obtained by the inventors for any of the inventions named in the foregoing list. For terms and further particulars address Munn & Co., 361 Broadway, New York.

AMERICAN VANADIUM CO
Manufacturers of
The Alloy that makes Anti-Fatigue Steel

ALMOST every man and woman in America is interested in the manufacture of Automobiles and the construction and equipment of railroads to just this extent—

"Is the steel used a safe steel?"

The factor of safety is the vital point in any material upon which human life depends. Vanadium Steel is safe as compared with the best steel heretofore known—its superiority is graphically shown in the following illustrations:—

Vanadium steel, 3/4 twists in 2 1/4 inches. Elastic limit of torsion 7,540 inch pounds. Ultimate torsion 30,700 inch pounds.

Carbon, high Manganese steel, 3/4 twists in 2 1/4 inches. Elastic limit of torsion 3,700 inch pounds. Ultimate torsion 17,250 inch pounds.

These pieces of steel are automobile axles. They don't look like it, but they are—regular I sections of a drop forged front axle. They have been twisted cold and show the relative strength and toughness of High Manganese and Vanadium Steels. The Manganese steel began to twist at 3,700 pounds per square inch pressure. The ultimate force required to twist it as shown was 17,250 inch pounds. The Vanadium steel required 7,540 inch pounds to start it and 30,700 to twist it as shown. Almost two to one in favor of Vanadium.

This test was made by a prominent automobile manufacturer. Vanadium steel will be used in many of the best American Cars in 1908.
